<td>ANT 2410</td>
<td>Introduction to Cultural Anthropology</td>
<td>3</td>
<td>This course introduces the origin and development of human lifeways with emphasis on non-Western societies. A comparative perspective is used to examine language, social organization, religion, values, and technology. Attention is also given to contemporary world problems.</td>
<td></td>
<td>Anthropology</td>
<td>Social Science; Diversity</td>
<td>Available online</td>
</tr>
<tr>
<td>ANT4930*</td>
<td>Special Topics: Evolutionary Medicine</td>
<td>3</td>
<td>The evolutionary history of our species is being used more and more in modern medicine to understand the genetic roots of illness. However, there is a great deal about the dynamics between genes, environment, and health that is still poorly known. In this course, we explore a wide range of topics – disease, diet, birth, death, stress, drugs – from the perspective of biological anthropology with an emphasis on determining how much of our health may be attributed to things that happened many generations before we were born, and how our actions today may be impacting the health of future generations.</td>
<td></td>
<td>Anthropology</td>
<td></td>
<td></td>
</tr>
<tr>
<td>ANT4930*</td>
<td>Special Topics: Global Health Cultures</td>
<td>3</td>
<td>This class explores crucial questions about health, well-being, medicine, environment, gender, race, and social inequality in the twenty-first century. We will 1) cover basic principles in medical anthropology and public health to provide a common grounding; 2) survey the state of health disparities across the globe related to both communicable and non-communicable diseases; and 3) cover Indigenous health and health disparities with a particular focus on medical pluralism, or multiple overlapping medical/healthcare systems and understandings of disease causation and treatment.</td>
<td></td>
<td>Anthropology</td>
<td></td>
<td></td>
</tr>
<tr>
<td>ANT4930*</td>
<td>Special Topics: One Health</td>
<td>3</td>
<td>This course provides a detailed overview of the history, utility, application, and future of the One Health paradigm. One Health is the concept that the health of humans, wildlife, domestic animals, and ecosystems are all dependent on one another. Physicians, public health professionals, veterinarians, social scientists, and others all contribute to this paradigm, which takes an inclusive approach to the study of broad determinants and indicators of health across species and biomes. In the current Anthropocene epoch – characterized by rapid and complex human modifications of the global environment – such an approach to medicine and health is critically important. To this end, students will be trained on the fundamental topics and methods in One Health to better understand the complexities involved in global disease prevention and control.</td>
