

Non-Treatment TMS Research Opportunity

**You may be eligible to volunteer in a paid research study at FSU
Neuromodulation located at Innovation Park.**

Doctors and researchers at Florida State University (FSU) study diseases and other health problems. Our goal is to find better treatments for these health problems. To do this, we need the help of people who are willing to be in research studies.

The purpose of this study is to understand how individuals tolerate different types of Transcranial Magnetic Stimulation (TMS) protocols on different parts of the scalp. We may also evaluate the knee as an additional location to test different TMS protocols. There will be 1-2 sessions, and approximately 3 hours of total time spent at the lab. Eligible participants will be compensated for their time.

We are looking for adults aged 18 years and above who are willing to receive TMS in a non-treatment study.

Potential participants will be screened for eligibility and provided more details about our research. Eligibility for studies and total participation time will vary.
