Overview

Human Systems in Health and Disease

Course Goals

Host-Defense is the first block of **Human Systems in Health and Disease**, a sequential study of the human functional systems that builds on the structure and function knowledge acquired in **Foundations of Medicine 1: Organization and Structure** and **Foundations of Medicine 2: Molecules to Mechanisms**. **Host-Defense** prepares students to study health and disease in specific systems through mastery of fundamental knowledge of the structure, function and diseases of the immune system and of the two most basic mechanisms of human disease: inflammation and neoplasia. The course emphasizes concepts and integrates knowledge from traditional disciplines such as biochemistry, cell biology, histology, immunology, microbiology, pathology, pharmacology, and physiology in the context of clinical application. COM mission-based domains are underscored in specific objectives that address important host-defense issues in geriatric, rural and other underserved populations, such as the blunted immune response to vaccines in elderly patients. Concepts and knowledge acquired in **Host-Defense** are expanded in later courses. For example, the various functions of the white blood cells are presented in **Host-Defense**, and the pathobiology of these cells is further elaborated during the final systems block, **Hematologic System**. Knowledge of the underlying science is used to explain the clinical findings of inflammation, infection and cancer. In a similar way, students learn how to interpret the results of fundamental laboratory tests used to diagnose inflammatory, infectious, neoplastic and immune diseases. Students also begin to learn how to select appropriate additional tests in a cost-effective and evidence-based approach. Curricular themes such as cultural issues, ethics, and public health are developed as essential components in case studies, for example, attitudes, choice and personal vs community consequences of decisions related to vaccination, and in clinical encounters with standardized patients. Students completing **Host-Defense** will understand the structure and function of the immune system in health and disease and its impact on individuals, families, society, and the health care system. They will develop a strong appreciation of how immune cells can protect the host from infection and cancer, and how immunosuppression predisposes to it. Students will also learn how, during the course of chronic inflammatory diseases, immune cells may cause collateral damage to the host and how the influence of tumor cells on immune cells may allow them to spread throughout the body. The block additionally covers the basics of pathogenicity of microbes and the drugs used to suppress immune responses (immunosuppressive) and treat infection (antibiotic), inflammation (anti-inflammatory) or cancer (antineoplastic). Mastery of these concepts will enable students to understand the pathogenesis of the two most common groups of human diseases: inflammatory and neoplastic diseases as they impact the systems studied in the remaining blocks of **Human Systems in Health and Disease**.

Learning Objectives

Detailed learning objectives are provided for each session in the course.

The global course objectives are:

1. Compare and contrast the structures and functions of the immune system cells (WBC) and organs (bone marrow, thymus, spleen, lymph nodes).
2. Compare and contrast the cellular mechanisms regulating genomic stability, cell growth, cell senescence and cell death.
3. Describe the cellular mechanisms involved in cancer invasion and metastasis and their relationship to immune system functions.

4. Compare and contrast the features of benign and malignant neoplasms and classify them using appropriate nomenclature.
5. Classify autoimmune inflammatory, infectious and neoplastic diseases according to their mechanism of pathogenesis.
6. Discuss the pathogenicity of the various types of microbes associated with immunodeficiency and cancer.
7. Demonstrate the ability to select, justify and interpret adequate laboratory or imaging tests to establish an appropriate diagnosis and support the treatment and management of autoimmune inflammatory, infectious and neoplastic diseases.
8. Interpret clinical presentations, including symptoms, signs and/or laboratory findings based on an understanding of the mechanisms of pathogenesis leading to autoimmune inflammatory, infectious and neoplastic diseases.
9. Explain the physiological and psychosocial aspects of disease progression associated with autoimmune inflammatory, infectious and neoplastic diseases.
10. Describe the appropriate prevention and management of autoimmune inflammatory, infectious and neoplastic diseases, including pharmacological and non-pharmacological approaches.

Course Format

Host-Defense is organized in three modules: 1) Basic Immunology, 2) Immunopathology, and 3) Neoplasia and Cancer. The course emphasizes engaged and active learning through a variety of individual, interactive large group, and case-based small group learning activities as well as standardized patient encounters in the Clinical Learning Center. Formative on-line assessment materials emphasize the development of thinking skills through analysis of data and cases, including biostatistics and epidemiology and NBME/USMLE-type questions. Students are expected to self-assess their learning needs and set goals to address them with the aid of faculty and their learning groups.

Large Group Sessions

Formal lectures are limited in favor of interactive large group sessions. This learner-centered model uses the principles of active and “flipped” learning. Pre-class preparation by students allows large group time to be spent in active discussion and consolidation of learning that takes maximum advantage of faculty expertise in application exercises and other instruction methodologies. Pre-class preparation assignments prime students for learning with basic didactic material presented through a variety of materials including interactive modules, self-assessment exercises, video and PowerPoint presentations, and textbook and journal readings. Interactive large group sessions apply and extend that knowledge through clinical case-based inquiry. Success depends on student engagement, preparation, and trust in the safe environment we maintain to encourage students to be curious and even to take intellectual risks. **The emphasis is on developing integrated basic and behavioral science concepts in a clinical context.** Whenever possible, real patients will be present to share their stories and demonstrate signs of their disease. Whenever patients are present, we ask that students wear their white coats and close their computers and other mobile devices as demonstration of respect for these wonderful patients who are willing to help us learn.

Small Group Sessions (attendance required)

Small group exercises are case- and/or problem-oriented. Some sessions pattern thinking through **progressive disclosure**, others focus on **concept development** through guided engagement with data, while others employ the Jigsaw paradigm to focus on discovering **similarities and differences** of presentations or aspects of disease – the basis of differential diagnosis. Small group exercises are designed for **engaged and active learning** and emphasize reasoning, hypothesis formation, and hypothesis testing. The groups evaluate cases in terms of stated objectives and define additional learning objectives they will need to resolve. In Jigsaw exercises each small group (5-6) of students is assigned a case presentation to discuss and form an hypothesis. Typical questions to be resolved may include: *What explains the presentation? What may be the cause? What more do we need or want to know? How do we acquire and interpret needed information? What are the options/priorities for treatment and management?* Then the small groups re-mix such that each member of each new group “owns” a different case or aspect of a case, which he/she then “teaches” to the new group. In all small group exercises, **all members of the group share responsibility for analyzing and explaining the clinical presentations.** The value of small group exercises is not always the “answer,” but the **reasoning** behind it. Basic and clinical science faculty will be present to ask helpful questions if your group is “stuck” and to encourage your curiosity. During small group exercises, you are free to use any resources (unless otherwise instructed). At the end of each small group exercise, you will be expected to review the complete cases and create a summary in your own words of the “take home” points of the cases considered as a group. **Summarizing and paraphrasing in your own words is a powerful learning tool.**

Clinical Learning Sessions (CLC) (attendance required)

Throughout the block learners will continue to develop their clinical skills and clinical reasoning during individual or paired SP encounters in the CLC. These encounters will not be restricted to the exam or problems associated with the specific system being studied in the block. They will often include reviews of prior organ systems and demonstrations of how systems intersect and impact one another.

Senior Mentor Program (attendance required for Medical Students)

Through participation in the **Senior Mentors Home Visits Program**, students learn about the biopsychosocial perspective of aging and develop skills in active listening and history taking. The activities and assignments of the Program occur throughout the Fall semester of Year 1 and contribute to the grade of all three (3) Fall courses: **Molecules to Mechanisms, Host-Defense, and ANS, Endocrine and Reproductive Systems**. The Senior Mentor Program pairs two (2) students with an independently-living older person in the community. Working as a team, the students visit with the assigned Senior Mentor 3 times during the semester. Each visit is associated with a set of objectives that develop an understanding of the importance of knowing a patient first as a person and how information on background, education, work history, belief systems, values, and personal needs contributes to that understanding. Following each visit, both team members complete and submit the appropriate assignment form. Completed assignments are discussed in small groups. Students are responsible to schedule their visits with their Senior Mentors to allow adequate time to complete and submit these written assignments **no later than the due dates: 10/1, 11/1 and 12/1**. The appropriate assignment forms are found on the Blackboard sites of the Fall semester courses. **Note, the second Senior Mentor visit occurs during Host-Defense, and the second written assignment is due before the beginning of ANS, Endocrine and Reproductive System.**

Professionalism

Medicine is a Profession, which means it entails unique responsibilities and obligations as well as unique privileges. "Professional identity formation" is an objective as important as learning the sounds and anatomy of the heart, but requires a different set of learning skills. Important among those are integrity, reflection, self- and peer assessment, deliberate practice, and learning for mastery (not grades).

Two essential Professional behaviors that will become a part of your everyday life are founded on respect for patients:

Confidentiality:

Patients — including Standardized Patients— deserve to be treated with respect. Respect for patients includes keeping all patient information confidential. Patient information may be shared with other health care professionals that have a legitimate, professional "need to know," or with specific family members, friends, or others that have permission from the patient for access to the information.

Be especially conscious about discussions of patients in public places. Even when patient names are not used, the discussion may reveal the patient's identity to others who overhear the discussion. Rather than risk a violation of patient confidentiality, discuss patients only in a private setting and only with individuals who have a legitimate need to know.

Be careful to keep all patient notes, reports and materials confidential. Patient records, should be returned to faculty, destroyed, or kept in a secure place.

Similarly, your classmates deserve to be treated with respect. Information learned about your classmates and their families while in class is considered confidential. You are not free to disclose this material to others without the specific consent of the person.

Violation of confidentiality may result in a Report of Concern for Unprofessional Behavior [hot link to student handbook] and may be referred to the Student Evaluation and Promotion Committee (SEPC). Egregious unprofessional behavior of any variety may result in suspension of the student, a failing grade for the course, and/or referral to SEPC.

Professional Attire:

Medical students, faculty and staff are all ambassadors and representatives of the College of Medicine and of the medical profession. Appearance and behavior should at all times demonstrate respect for the profession and for our patients. The needs of patients must always come first, and any barriers to meeting those needs (including attire, appearance and grooming) must be removed.

Professional attire should be worn in settings where students interact with people from outside the COM, and particularly when interacting with Standardized Patients (SPs) in the CLC, on a "house visit," or when in a preceptor's office or clinic, a hospital or nursing facility. Professional attire should also be worn when patients, guests, or visitors are present in large or small group sessions.

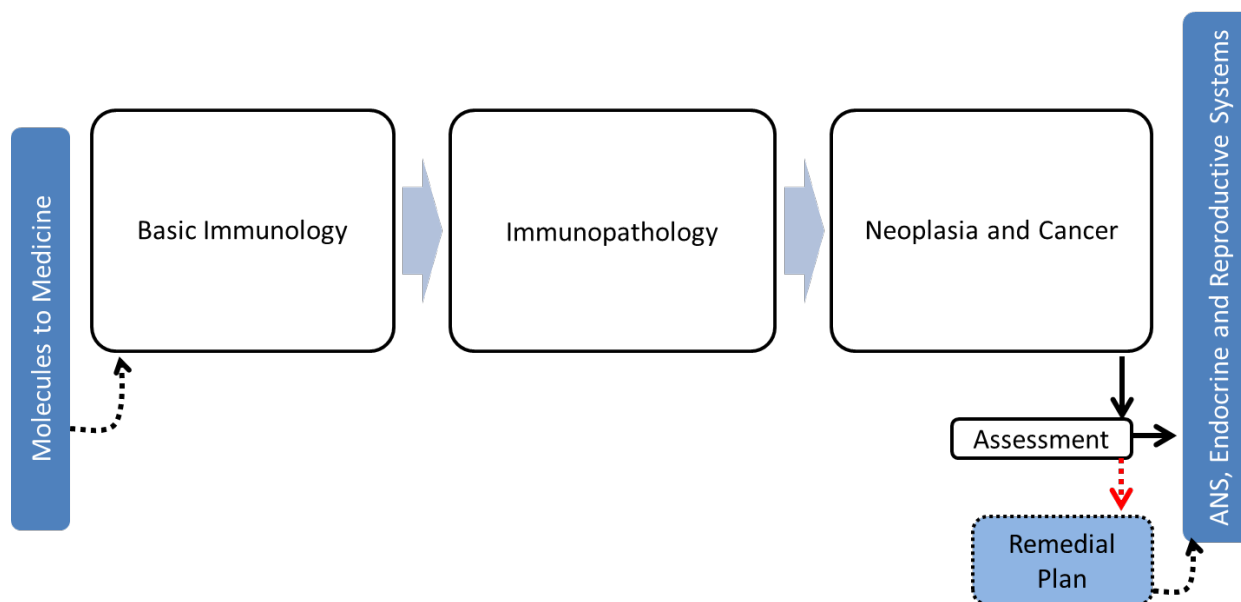

Specific standards for professional attire for [men](#) and for [women](#) are detailed at the end of this document and can always be found on the course Blackboard site.

Competencies

Competency Domains	Competencies Addressed	Methods of Assessment
Patient Care	<p>Demonstrate the ability to elicit an accurate and thorough medical history and physical examination appropriate for the patient's reason for visit</p> <p>Demonstrate the ability to assess the "patient's unique context" (including family, community, cultural, spiritual, historical and legal factors) and incorporate that information into his/her care</p>	Faculty observation; small group and CLC exercises
Knowledge for Practice	<p>Compare and contrast the structures and functions of the immune cells and organs (bone marrow, spleen, thymus, and lymph nodes)</p> <p>Describe the mechanisms of the infectious and non-infectious inflammatory diseases, the mechanisms that control genomic integrity and cell growth and its failure during carcinogenesis</p> <p>Interpret clinical presentations, including symptoms, signs and/or laboratory findings based on an understanding of the structure and function of the immune cells and organs</p> <p>Demonstrate the ability to select, justify, and interpret appropriate laboratory or imaging tests in order to establish the appropriate diagnosis and management of immunosuppression, infection, inflammation and cancer.</p> <p>Explain the physiological and psychosocial aspects of disease progression for the immune disorders, infection, inflammation and cancer and describe their appropriate prevention and management, including pharmacological and non-pharmacological approaches</p>	Formative quizzes, written exam, faculty observation in large group, small group, and CLC activities
Practice-based Learning and Improvement	<p>Demonstrate the habits of life-long learning – the identification of personal knowledge gaps and application of strategies to find and interpret information to address those gaps.</p> <p>Apply the principles and methods of Evidence-Based Medicine to acquire, appraise, and assimilate new clinical information to improve patient care.</p>	Self-assessment, small group exercises; written exams
Communication and Interpersonal Skills	<p>Use accurate and appropriate vocabulary and concepts to communicate effectively with peers, patients and faculty about immune function.</p> <p>Demonstrate respect, empathy, compassion, responsiveness and concern regardless of the patient's problems, personal characteristics.</p> <p>Communicate diagnostic information and reasoning, intervention options, and a suggested plan of care with truthfulness, sensitivity and empathy.</p>	Faculty observation, small group and CLC exercises
Professionalism	<p>Complete all required activities in a timely fashion.</p> <p>Maintain confidentiality for patients who participate in the course.</p> <p>Demonstrate professional behavior in all interactions with peers, patients, and faculty.</p>	Faculty observation; peer and self-evaluation

Content Sequence

Content sequence in Host-Defense:

Throughout the block, continued development of clinical reasoning and clinical skills focuses on advanced history taking, advanced physical exam maneuvers, and the interpretation of common diagnostic tests relevant to these systems. Standardized patient interactions continue with emphasis on clinical reasoning skills using problem oriented and chronic disease encounters that are not limited to block-specific content.

Basic Immunology

- Immune cells and organs; structure and function
- Immune responses: Innate and Adaptive Immune Responses
- Interpretation of lab tests to assess immune function

Immunopathology (Diseases of the Immune System)

- Immunodeficiency
- Immune tolerance and Autoimmunity
- Inflammation
- Infection

Neoplasia and Cancer

- General Principles and Nomenclature
- Molecular Biology of Cancer Transformation
- Tumor Invasion and Metastasis

Required Materials (All required texts are available as ebooks through COM library [Preclerkship Resources](#) page)

Basic & Clinical Pharmacology (Katzung)

Bates Guide to Physical Examination and History Taking

Behavioral Science in Medicine (Fadem)

Histology: a text and atlas with correlated cell and molecular biology (Ross)

How the Immune System Works (Sompayrac)

Physiology (Costanzo)

Resolving Ethical Dilemmas: A Guide for Clinicians (Lo)

Robbins and Cotran Pathologic Basis of Disease (Kumar)

Sherris Medical Microbiology (Ryan)

Smith's Patient-Centered Interviewing: An Evidence-Based Method (Fortin)

Additional required readings will be assigned from a variety of sources. These readings will be provided to you and posted on Blackboard when possible.

Additional materials required for clinical sessions

- a. Clinical examination equipment: Each student must purchase and/or have available the following clinical examination equipment: stethoscope with diaphragm, bell and pediatric option, oto/ophthalmoscope, #128 and #512 tuning forks, penlight, reflex hammer, Rosenbaum eye chart and a sphygmomanometer with pediatric, adult, and large adult sized cuffs. Opportunities to purchase this equipment at a discount will be provided prior to orientation. Bring your examination equipment with you to each CLC session.
- b. Also bring the following to each session in the CLC:
 - A watch capable of measuring seconds
 - A pen for writing (blue or black ink)
 - The student's personal mobile device loaded with the appropriate medical software/applications.

Grading System

Description of Student Assessment Methods and Grading

Examinations

There will be one written assessment at the end of the course. Formative quizzes and/or other assessment exercises will be required throughout the block but do not contribute to the final grade.

Written exams

Multiple choice and other question formats are used to assess both content knowledge and application skill (ability to solve problems, demonstration of clinical reasoning, interpretation of images and laboratory results, etc.) on written exams. Exam questions may be drawn from material presented in any activity or assignment, from assigned readings, and from CLC sessions. Exams are cumulative across the curriculum, i.e., main concepts, content and skills from material presented in prior courses may be included in questions. Written questions may also be presented in context with standardized patient encounters during the examination.

Students must score a cumulative average of $\geq 70\%$ on all exam questions to pass the written examination component of the course. Students with a written exam average below 70% risk failing **Host-Defense and being referred to the Student Evaluation and Promotions Committee.**

Clinical skills exams / Objective Structured Clinical Examination (OSCE)

Formative and summative assessment of clinical skills occurs periodically throughout the preclerkship phase. OSCEs are skills-based examinations conducted in the CLC to assess the student's ability to demonstrate clinical skills and behaviors. OSCEs typically consist of several "stations." Each station will require the student to demonstrate one or more clinical skills/behaviors that will be assessed by a trained observer using established performance criteria for that assessment. A formative OSCE will occur at the end of Host-Defense. The OSCE will provide students with feedback on their ability to perform an organized "head-to-toe" physical exam.

The grading criteria for the formative OSCE will be the same as for a summative exam, however the score will not impact the final pass/fail grade for **Host-Defense**. The passing score for an OSCE is $\geq 80\%$. Students who do not achieve a score of 80% or higher on the formative OSCE must develop a plan to remediate these clinical skills. The OSCE remediation plan must be determined prior to the beginning of the next block.

Formative Quizzes

Throughout the course there will be formative on-line quizzes that allow students to self-assess their mastery of the material. Formative quiz questions do not contribute to the cumulative course average. They are important opportunities for students to practice the self-assessment and responsibility for their own learning that are part of Professional behavior. The results of the formative quizzes will be tracked as a measure of student progress and to help faculty connect students with resources that will help them succeed in the curriculum.

Grading

The FSU COM has adopted a pass/fail grading system, which is used in the curriculum for the first and second years (See Student Handbook). To achieve a grade of Pass in BMS 6041 (**Host-Defense**) a student must meet all of the following requirements:

1. A final exam **average** $\geq 70\%$. An average $<70\%$ will receive a grade of fail, which will require remediation or repetition of the course, as proposed by the block directors and determined by decision of the Student Evaluation and Promotion Committee
2. A student whose performance is $<70\%$ (below passing) on any individual exam during the course is required to
 - a. Attend the exam review,
 - b. Contact the block directors within 24 hours of that exam review, and
 - c. Meet with the block directors. Students may be asked to complete a Performance Improvement Plan, the purpose of which is to assist the student in developing the skills and habits necessary to succeed in the curriculum as well as to address specific performance deficits
3. A student who achieves an overall passing score ($\geq 70\%$) but has demonstrated a significant deficit in one or more content areas will be required to develop and complete a Performance Improvement Plan in consultation with the block directors. The purpose of the Plan is to assure the student has the requisite knowledge base to succeed in subsequent courses in the curriculum.
4. Attendance and satisfactory participation in all required sessions, all activities scheduled in the CLC, and other activities as determined by the block directors and clinical skills director. Unexcused absence from an activity for which attendance is required may require remediation as determined by the block directors and clinical skills director. Multiple unexcused absences from required activities will be considered a Professionalism concern and may result in a **Report of Concern for Unprofessional Behavior** (see [Student Handbook](#)) and referral of the student to the Student Evaluation and Promotions Committee.
5. Demonstration of the attitudes and behaviors of Medical Professionalism in all aspects of the course. Professionalism concerns may generate a **Report of Concern for Unprofessional Behavior** (see [Student Handbook](#)) and may result in receiving a grade of fail in the course.
6. Satisfactory completion of all assignments, including the Senior Mentor Program, as determined by the block directors.

Course Evaluation

Students will have the opportunity to provide constructive feedback through evaluation forms. Evaluations will include both content and facilitation/teaching. Feedback is encouraged at all times on all components of the course and will assist the block directors in providing a timely continuous quality improvement.

Policies

Americans with Disabilities Act

Candidates for the M.D. degree must be able to fully and promptly perform the essential functions in each of the following categories: Observation, Communication, Motor, Intellectual, and Behavioral/Social. However, it is recognized that degrees of ability vary widely between individuals. Individuals are encouraged to discuss their disabilities with the College of Medicine's [Director of Student Counseling Services](#) and the FSU Student Disability Resource Center to determine whether they might be eligible to receive accommodations needed in order to train and function effectively as a physician. The Florida State University College of Medicine is committed to enabling its students by any reasonable means or accommodations to complete the course of study leading to the medical degree.

[The Office of Student Counseling Services](#)

Florida State University
Tallahassee, FL 32306-4167
Voice: (850) 644-9566
TDD: (850) 644-8504
sdrc@admin.fsu.edu

Academic Honor Code

The Florida State University Academic Honor Policy outlines the University's expectations for the integrity of students' academic work, the procedures for resolving alleged violations of those expectations, and the rights and responsibilities of students and faculty members throughout the process. Students are responsible for reading the Academic Honor Policy and for living up to their pledge to "...be honest and truthful and...[to] strive for personal and institutional integrity at Florida State University." (Florida State University Academic Honor Policy, found at <http://fda.fsu.edu/Academics/Academic-Honor-Policy>)

Attendance Policy

The College of Medicine has detailed attendance policies as they relate to each cohort and events that conflict with course schedules. See pages 28-29 of [FSUCOM Student Handbook](#) for details of attendance policy, notice of absences and remediation.

Unexcused absence from a scheduled examination or quiz may result in a score of zero (0 %) being assigned for that assessment. Unexcused absence from an activity for which attendance is required (for example, Small Group session) may be considered as an issue of Professionalism. Any unexcused absence may require completion of the Performance Improvement Plan (see Grading section, above).

Clinical Learning Center (CLC) Specific Absence Policy

CLC scheduled activities

Students with a legitimate reason to miss a scheduled session in the CLC must request an approved absence through Student Affairs through the [online link](#). Students with approved absences will be allowed to reschedule or participate in a make-up session. **Unapproved absences may not be rescheduled or made up.** Repeated unapproved absences may result in a failing grade for the course and a **Report of Concern for Unprofessional Behavior**.

If you know you will be absent from a scheduled CLC session, please complete the absence approval request at least two weeks in advance. For absences that are approved at least two weeks in advance, a change in CLC schedule assignment will be arranged.

One method for addressing a planned and approved absence is to identify a classmate willing to exchange scheduled sessions with you. In this situation, both students (the student with the approved absence and the willing classmate) should send a request via email to [Ms. Danforth](#) at least two weeks in advance. Students will be notified re: approval of these requests. Please note: Sending a request is NOT equivalent to receiving approval.

Unplanned but excusable absences from CLC sessions are absences due to circumstances *beyond the student's control*. Examples include student illness and/or family death. When such a situation occurs, please contact [Ms. Danforth](#) **as soon as possible**, to inform them that you will not be present. Then, submit an absence request to Student Affairs through the [online link](#). Student Affairs will classify the absence as excused or unexcused.

If the absence qualifies as an “excused” absence, the student must contact [Ms. Danforth](#) to develop a plan to make up the missed session. These sessions may require the presence of an SP and / or CLC faculty member. Any excused absence will not impact the student’s grade.

Unexcused absences generally involve circumstances *within the student’s control*. Examples of unexcused absences include the student who forgets about a scheduled CLC session, the student who skips the session to study, and/or any absence where an able student fails to contact Student Affairs and [Ms. Danforth](#) to inform them that the student will not be present for the session.

If the absence is unexcused, the clinical skills director will discuss the situation with the student. Any further unexcused absences will result in the notification of Student Affairs, a **Report of Concern for Unprofessional Behavior**, and referral of the student to the Student Evaluation and Promotions Committee. Students with unexcused absence(s) will still be responsible for the missed material in future OSCE’s and written examinations.

Objective Structured Clinical Examination (OSCE)

If a student knows he/she will not be able to participate in the formative OSCE, he/she should complete and submit the appropriate forms to Student Affairs, and, if within 24 hours of the time he/she is scheduled for the OSCE, contact [Ms. Danforth](#). If the absence is excused by Student Affairs, the student will receive an “I” (incomplete) grade and be required to complete a make-up OSCE at a designated time after the course has ended.

Any excused absence—whether planned or unplanned—will not impact the student’s grade.

Any absence that does not qualify as an excused absence per Student Affairs is an unexcused absence. These generally are due to circumstances within the student’s control. Examples of unexcused absences include the student who forgets about an OSCE session, the student who skips an OSCE to study for an exam and/or any absence where an able student fails to follow the procedures above if they are not able to participate in the OSCE. An unexcused absence from the formative OSCE will result in a **Report of Concern for Unprofessional Behavior**.

Professional Attire

Professional attire consists of clothes consistent with community norms for physicians. Examples of these norms in Tallahassee are: no jeans, seductive, revealing or tight-fitting clothes, sheer or see-through fabrics, strapless, low-necked or midriff-baring clothes, shorts, sweats, hats, or open-toed shoes.

For men, professional attire consists of slacks, a collared shirt and dress or casual shoes (no sport shoes or sandals). Ties may be either required or forbidden in some clinical situations.

For women, professional attire consists of slacks or a conservative length dress or skirt with a blouse or sweater. Skirt edge should rise no higher than 2” above the top of the knee during all clinical care and training maneuvers and should not be tight-fitting. Heels more than 3” in height are never appropriate in clinical settings.

For both men and women, a white lab coat is required. On those occasions when students are examining each other, you will be informed of the appropriate apparel for that session.

Professional appearance: Long hair must be pulled back and secured. Facial hair must be neatly groomed. If possible, all tattoos should be covered by clothing. No visible body piercing except a single piercing in each ear. No large earrings or loose jewelry. Fingernails must be trimmed. If nail polish is worn, it should not be a distracting color. No strong perfume or other scented products. In compliance with OSHA regulations, closed-toed shoes are required in all clinical settings—including the CLC.

The established “norms” of certain clinical settings may modify these standards for professional attire, but any variations in professional attire must be approved by the student’s supervisor. Consult your supervisor to clarify expectations for student attire in any ambiguous or new situations.
