WELCOME TO THE PROGRAM IN BIOMEDICAL SCIENCE

COLLEGE OF MEDICINE

FLORIDA STATE UNIVERSITY

INTRODUCTION

This booklet contains information needed for successful completion of your graduate degree program. Please read this Handbook thoroughly. Familiarity with the contents will assist you to make a smooth transition into the Program and Department of Biomedical Sciences, and will help to minimize complications or delays in your training program. Advisors are available for assistance, however, you are responsible for assuring that all requirements are satisfied to meet your planned graduation schedule.

The Handbook is divided into two parts. Part I is an abbreviated, narrative description with tables and other aids to guide you quickly through the requirements for your graduate training. Part II describes in detail the policies and practices of the Program that you need to be familiar with. Part II is in alphabetical order.

Materials in the Appendix include a Progress in Program checklist to assist you in keeping track of program requirements and their deadlines. Also, included are University Catalog descriptions of graduate courses offered in the College of Medicine, courses offered in other departments that are suitable elective courses, and forms that should be completed and turned in to the Graduate Program Office to record satisfaction of various Program requirements.

University Requirements: As a student at The Florida State University you need to meet certain requirements that apply to all graduate students. Important examples of processes governed by University standards include, but are not limited to registration procedures and deadlines, the Qualifying Examinations for Admission to Candidacy for the Ph.D. Degree, the composition and qualifications of your Supervisory Committee, residency requirements, and the defense and submission of your Dissertation. In addition to this Biomedical Sciences Graduate Student Handbook you should become familiar with University requirements described in the FSU Graduate Student Bulletin published by The Graduate School available at http://registrar.fsu.edu/bulletin/grad/.

The degree requirements and other expectations of a graduate student generally are specified in the Program in Biomedical Sciences Student Handbook and FSU Graduate Bulletin for the year that the student entered the Program. These documents are contracts; however, the
Program and University reserve the right to change requirements. Requirement changes and
the affected student entry dates are identified in this Handbook. Students with questions about application of requirement changes to their case should contact the Program Director for clarification.

The Director of Graduate Programs, Academic Program Specialist, and Biomedical Sciences Student Support Coordinator are available to provide student counseling about program requirements, registration, financial, housing and more personal matters. Please feel free to contact them as needed. We look forward to working with you and to your successful graduate training!

Yanchang Wang, Ph. D., Professor, Graduate Director, Associate Chair for Graduate Education
Department of Biomedical Sciences
Phone: 850 644 0402, Email: yanchang.wang@med.fsu.edu

Christina Goswick-Childers, Academic Program Specialist
Department of Biomedical Sciences, RM 1350-L
Phone: (850) 645-6420, E-mail: cgoswick-childers@med.fsu.edu

Jonquil Livingston, Biomedical Sciences Student Support Coordinator
Department of Biomedical Sciences, RM 3350-A
Phone: (850) 645-8379, E-mail: Jonquil.Livingston@med.fsu.edu
PART I. GUIDE TO GRADUATE STUDIES

I.1. Overview of Graduate Training for a Ph.D. in Biomedical Sciences

The specific recommendations listed below assume typical backgrounds. These requirements should be followed unless amended during academic advisement. Amendments may be made if you are exceptionally well prepared, or need to remedy deficiencies indicated by your transcripts and interview.

Your first year should be devoted to orienting yourself to the biomedical sciences, learning about independent research, choosing your Major Professor and the area of concentration of your graduate training, and satisfying initial requirements of the graduate program. Specifically you should

- complete the required course work with a minimum grade point average (GPA) of 3.0*;
- participate actively in laboratory rotations (two required);
- attend seminars regularly offered by the College of Medicine (Grand Rounds) and the Department of Biomedical Sciences seminar series. (You may also wish to attend specialty seminar series in this or other departments.)

In addition, as you near the end of your first year you should

- select your Major Professor and Supervisory Committee;
- design your Program of Studies in consultation with your Supervisory Committee; 4 members, 3 within the department of biomedical and one outside member from another academic department.
- begin research and explore dissertation project opportunities in the laboratory of your Major Professor.

* IMPORTANT NOTE: the University requires that graduate students maintain a minimum GPA of 3.0. A student is placed on academic probation after the first semester with a GPA below 3.0, and will be dismissed from graduate studies after two successive semesters with a GPA below 3.0.

In the second year you should become knowledgeable in your intended field of study, particularly the subspecialty of your Major Professor, become competent in laboratory techniques common to this field, and complete the majority of your formal requirements. Specifically you should

- complete required course work, including elective courses;
- regularly attend seminars as in Year 1;
- make substantial progress in independent research and defining a dissertation project;
- schedule and complete the comprehensive portion of the Qualifying Examinations (usually in the summer of your 2nd year)
- participate in collaborative research projects in the lab of the major professor;

In the third year you should complete the last formal Program requirements other than the dissertation, including achievement of Admission to Ph.D. Candidacy by passing the Qualifying
Examinations, continue to develop knowledge in Biomedical Sciences and your chosen specialty, finalize design of your dissertation project, and make good progress in achieving your project aims. Specifically

- schedule and complete the presentation of your dissertation proposal, required for Admission to Ph.D. Candidacy (Spring of year 3);
- attend seminars as in Years 1 & 2;
- make progress in experiments to achieve the aims of your dissertation project.
Years 4 and 5 should be used to achieve the specific aims of your dissertation research project, to achieve expert knowledge and skills in your specialty area, to achieve broad knowledge in the biomedical sciences, and to publish and publically present major findings of your dissertation research. These years are the opportunity for you to focus on developing research and communication skills expected of a Ph.D. scientist. The time required to complete this phase of your training cannot be given precisely. Important research projects in biomedical sciences require a high degree of sophistication in thought and experimental techniques. Nationally, the average time to the Ph.D. in the life sciences is 5 to 5.5 years, but somewhat shorter and longer times are not unusual. Some students have graduated in as little as four years. Students in the Biomedical Sciences Ph.D. Program are expected to complete their degree within six years unless there are extenuating circumstances. The major uncertainty in the time to achieve your degree is you. Simply put, the students that work hardest and smartest are generally the earliest to graduate. Specifically you should:

- Complete dissertation research
- Present departmental research seminar
- Give research presentation (talk or poster) at a national scientific meeting
- Publish first author manuscript
- Defend dissertation
- Secure position in chosen area of interest (post-doctoral scientist, industry position, teaching position, etc.)
I.2. Summary of Degree Requirements

Following is a list of requirements. Recommendations for a typical semester-by-semester schedule are given in a later section.

I. Required Courses in Approximate Sequence (credit hrs. per semester unless noted otherwise, r=repeatable)

II. Other Requirements

- **Elective Courses**: (9 credits required) to be selected from offerings of GMS 6001.
- **Special Topics in Biomedical Sciences (1-3)** or APPROPRIATE GRADUATE COURSES in consultation with the [Supervisory Committee](#). A partial list of applicable courses is provided in the Appendix. (Note: the Supervisory Committee may recommend additional electives to satisfy additional training requirements in certain specialties.)
- **Seminar attendance**: Regular attendance at seminars of the Department of Biomedical Sciences and the College of Medicine (Grand Rounds) is required throughout the graduate training period. Students normally should enroll in the corresponding courses: BMS 6936. Seminar in Biomedical Sciences (1-2), and IHS 5935. **Health Sciences Seminar** (1). The current University limit nine of (9) credit hours per semester for a full academic load may prevent registration for these seminar courses when a student is taking several required courses, especially in the first year.

Regular seminar attendance is expected as a matter of professionalism, whether the student is registered or not for the seminar. (NOTE: The requirement for enrollment in seminar courses will be waived for a Ph.D. Candidate who intends to graduate in the current academic year and otherwise is not able to accumulate the minimum of 24 credit hours of Dissertation Research.)
- **Seminar presentations**: Students are required to give one departmental seminar in order to graduate. In addition, students are expected to give one research presentation (oral or poster) at a national scientific meeting.
- **Laboratory Rotations**: Students in their first year are required to begin research...
training through rotations in research laboratories of at least two faculty members and enroll in BMS 5186C. Research Techniques in Biomedical Sciences. Rotations are intended to be learning experiences as well as opportunities for students to become
familiar with faculty members and their laboratories before selecting their Major Professor.

- **Qualifying Examinations for Admission to Candidacy**: see Part II for details
- **Publications**: Students are required to publish at least one first author manuscript. The manuscript should describe a significant aspect of the research and must be accepted for publication prior to the scheduled Defense of Dissertation.
- **Research and Dissertation**: Perform dissertation research under the direction of a supervising Major Professor. Submit, publicly present, and successfully defend a Dissertation describing an original research project in biomedical sciences. Dissertation Format and Defense of Dissertation requirements are specified by the University. Details are provided in Section II of this Handbook and in the **University Graduate Bulletin**.
I.3. Registration for Classes

The Program Director and Academic Program Specialist assist students in registering for their first semester of classes after the advisement period.

Students are responsible for selecting courses in subsequent semesters. Prior to the Registration Window students should fill out a Graduate Course Registration Form (see Appendix), have the form signed by their academic advisor, then take the completed form to the Academic Program Specialist. Registration is carried out through the FSU Online Registration and the Biomedical Sciences Registrar (Christina Childers). Window dates for FSU Online Registration are published by the FSU Registrar. The COM Enrollment Coordinator will register students for requested classes that are offered in the College of Medicine. COM classes have a BMS, GMS or IHS prefix. Students must use the FSU Online Registration to register for all other classes; that is, classes offered by other Colleges of the University--be sure to pay attention to registration dates to avoid being charged for late fees.

IMPORTANT NOTE: Students are not allowed to carry out Online Registration or register through the COM Enrollment Coordinator if they have outstanding fees of any sort (ordinary or penalty fees such as parking or library fines, late fees, etc.). Please be sure that you have paid all applicable fees before attempting to register by any means.

I.4. Annual Performance Evaluations

Graduate students are expected to perform at a high level and will be reviewed annually for continuation in the Graduate Program. Poor performance and unprofessional behavior are grounds for dismissal from the Program. Evaluations of each student are performed annually according to University policy. Students in the Program are evaluated during the spring semester each year. Evaluations of student performance in the first year are the responsibility of the Program Director in consultation with the Graduate Program Committee and Major Professor. Subsequent annual evaluations are performed by the student’s Major Professor with other members of the Supervisory Committee and reported to the Program Director by the Major Professor. The Graduate Program Committee meets with the student to review progress towards graduation. See Evaluations section in Part II for further details. The Graduate School also keeps a record of the annual review via the Graduate Student Tracking System.

I.5. Detailed Recommendations for Year One

Advising: The Program Director and his assistant will advise you for course registration and other matters when you enter the Program during Orientation week. The Director will continue to serve as your advisor for the first two semesters or until you have selected a Major Professor.

Living Stipend, Tuition and Fees: Your stipend and tuition are paid through the College of Medicine offices, regardless of funding source. The Academic Program Specialist will assist you in processing forms needed to pay tuition and to receive your stipend before the first semester. Each subsequent semester you are required to sign a Graduate Waiver Receipt Form agreeing to waiver policies. These forms become part of your permanent file stating that you are liable for tuition should you withdraw from the University. Any questions you have regarding these forms can be answered by the
Academic Program Specialist.
Student fees must be paid directly by you each semester. University practices do not allow direct payment of student fees by the College. For this reason your biweekly stipend is increased by an amount that will compensate you for the cost of fees you incur during the year. Please note that you must budget accordingly so that you can pay fees due each semester on time. The Program cannot reimburse you for any penalties incurred for late payment of normal fees or late registration. You are also responsible for costs of services such as parking and healthcare. See University sources on these matters.

**Schedule of Classes:** You should register for the following courses in the indicated semesters unless advised otherwise. Credit hours for each course are listed in parenthesis ( ).

### Fall Semester:
- PCB 5595: Advanced Molecular Biology (3)
- STA 5172: Biostatistics (3)
- BMS 5186C: Research Techniques in Biomedical Sciences (3)

### Spring Semester:
- PCB 5137: Advanced Cell Biology (3)
- BMS 5525: Bioregulation (4)
- BMS 5185: Research Opportunities in Biomedical Sciences (1)
- STA 5172: Biostatistics (3)

### Summer Semester:
- BMS 5935: Advanced Topics in Biomedical Sciences (1)
- BMS 5905: Directed Independent Study in Biomedical Sciences (8)

**Other Requirements (Year 1)**
- **Seminar Participation:** Attendance at Health Sciences Seminar (Grand Rounds) and Biomedical Science Seminar series in the fall and spring semesters.
- Selection of [Major Professor](#) before end of spring semester.
- Selection of [Supervisory Committee](#) before end of summer semester.

**I.6. Recommendations for Year Two**
You, your Major Professor and the other members of your Supervisory Committee should meet during the fall semester of your second year to determine the courses in your [Program of Studies](#). Normally you should expect to accomplish the following in the second year.

- Take appropriate elective courses. You may take elective courses in other departments that are consistent with your training goals. The Supervisory Committee may recommend electives beyond the minimum nine hours to satisfy additional training requirements in your specialty area. (You may also choose to change or add courses to your Program of Studies as new offerings become available. The Program of Studies should be reviewed and updated annually.
- Regularly attend seminars as in year one and enroll in [IHS 5935: Health Sciences Seminar (1)](#) and [BMS 6936: Seminar in Biomedical Sciences (1)](#) in the fall and spring semesters.
- Enroll in [BMS 5935: Advanced Topics in Biomedical Sciences (1)](#) in the summer semester.
- Enroll in sufficient credit hours of [BMS 5905: Directed Independent Study in Biomedical Sciences (1-12)](#) in addition to other courses to achieve 9 credit hours per semester.
• Schedule and complete the comprehensive examination portion of your Qualifying Examinations with your Supervisory Committee during the summer semester.
I.7. Requirements in Additional Years

- Write and present your dissertation research proposal, normally by the end of the fall semester of Year 3. You should enroll in IHS 8960: Preliminary Doctoral Examination (0) and IHS 5503: Proposal Development (1) in the semester in which you intend to defend your dissertation research proposal. (Note: After you successfully present and defend the dissertation proposal you have passed the Qualifying Examinations and qualify for admission to Candidacy for the Ph. D. Degree.)
- Regularly attend seminars as in prior years and enroll in IHS 5935: Health Sciences Seminar (1) and BMS 6936: Seminar in Biomedical Sciences (2) in the fall and spring semesters. (NOTE: The requirement for enrollment in seminar courses will be waived for a Ph.D. Candidate who intends to graduate in the current academic year and otherwise is not able to accumulate the minimum of 24 credit hours of Dissertation Research.)
- Present the required research seminar and give research presentation (talk or poster) at a national scientific meeting
- Register for sufficient hours of IHS 6980: Dissertation Research (1-12) in addition to regular classroom and seminar courses to satisfy the enrollment requirements for the semester (currently nine (9) credit hours; subject to change). Complete a minimum of 24 hours of Dissertation Research to qualify for graduation.
- Submit and have accepted at least one first author publication to a peer-reviewed journal
- Write and defend your dissertation. Enroll in IHS 8970: Dissertation Defense (0) in the semester in which you plan to defend your dissertation.

PART II: POLICIES, PRACTICES AND REQUIREMENTS

II.1. Admission to Candidacy for the Ph.D. Degree

The University does not award a student official Candidacy for the Ph.D. degree until he/she has met Program/Department requirements and has demonstrated basic competencies necessary for successfully completing the independent scholarly activities and dissertation for the Ph.D. degree. These competencies are assessed, in part, by the Qualifying Examinations. A student is awarded ‘Admission to Candidacy for the Ph.D. Degree’ after they pass both components of the Qualifying Examinations. Students should submit the appropriate approval form (provided in the Appendix), signed by the Supervisory Committee, to the Academic Program Specialist (Christina Childers).

Students are expected to complete the requirements for Admission to Candidacy during the third year of graduate studies unless there are extenuating circumstances. Students are eligible to register for IHS 6980. Dissertation Research (1-12) after their Supervisory Committee approves Admission to Candidacy. A student must complete a minimum of twenty-four (24) credit hours of IHS 6980 ‘Dissertation Research’ in order to graduate with the Ph.D. degree. The FSU Registrar must receive a completed ‘Admission to Candidacy’ form signed by the Dept. of Biomedical Sciences Chair and submitted by the Program/Department office before a student will be allowed to register for Dissertation Research. This form is available at http://registrar.fsu.edu/services/images/admiss_to_candidacy.pdf. Additional details about the Admission to Candidacy process are described in the later section on the Qualifying Examinations.

II.2. Advisement

Year 1: Entering students are advised by the Graduate Program Coordinator and Graduate Program Committee until they select a Major Professor. The Program Director will also explain procedures and provide advice for selecting laboratory rotations and a Major Professor.

The Major Professor is the principal advisor and mentor of a graduate student after the first year. Academic and other advice and counseling are available to the student and Major Professor from the Graduate Program Director, the Academic Program Specialist, the Biomedical Sciences Student Support Coordinator, and the Associate Dean for Research and Graduate Studies. Students are particularly encouraged to become acquainted with the Academic Program Specialist and the Biomedical Sciences Student Support Coordinator, both of whom provide valuable assistance to students on a variety of matters.

The following individuals are available to provide student counseling. Generally speaking, the Graduate Program Director (Yanchang Wang) most commonly addresses questions about Program requirements and academic status/evaluations; the Academic Program Specialist (Christina Childers) processes applications for admission, addresses employment and other issues of newly entering students, serves as Enrollment Coordinator enrolling students in COM courses, provides advice on registration procedures, and assists students throughout their academic career offering advice on a variety of issues; and the Biomedical Sciences Student Support

Biomedical Sciences Graduate Student Handbook
Coordinator (Christina Goswick-Childers) maintains records of students’ performance, maintains correspondence with program
II.3. Assistantships and Fellowships (Financial Support)

Program-Based Assistance: It is the intent of the Program to assure that all students receive financial support during their graduate training. Graduate students are supported on an assistantship from Graduate Program funds during the first year of training. The Major Professor is normally expected to support a student on a Research Assistantship (RA) from external grant funds in the first year after the student is accepted for mentorship; and to support the student on an RA in successive years if grant funds are available. Students are also strongly encouraged to apply for external and University fellowships that they may qualify for (see also below). If insufficient funds are available from grant sources or fellowships, the Program provides support contingent on satisfactory student progress in his/her degree program and availability of funds.

External and University Fellowships: Fellowships supporting graduate education are available on a competitive basis from a number of government sources and private foundations. In addition, Florida State University annually makes available on a competitive basis several fellowships to graduate students of all disciplines. Students are encouraged to apply for all sources of graduate fellowships as they may reasonably qualify for, both before and after they enroll in the Program. Receipt of an external competitive fellowship is a significant honor. The College of Medicine Division of Research, Graduate, and Undergraduate Programs and the University Office of Research can be consulted for details on fellowship programs. Students submitting a fellowship application that involves completion of a substantial research proposal (e.g. NIH, NSF) will be allowed to use this research proposal as part of their Qualifying Examinations requirement.

Receipt of a FSU fellowship of any type also is a worthy honor and assists the Program. Entering students may qualify for a College Teaching Fellowship or a McKnight Black Doctoral Fellowship. University Dissertation Fellowships are available for students entering their final year of graduate studies. University Fellowships are available to all graduate students. (Note: according to University sources, applicants with less than either a combined aptitude score of 1200 on the Graduate Record Examination or an undergraduate grade point average of 3.5 on a 4.0 scale stand little chance of receiving a University Fellowship unless one or the other is superlatively high, or letters of recommendation are exceptionally laudatory.) Information and applications are
available from the University website [http://www.gradstudies.fsu.edu/Funding-Awards/Graduate-School-Fellowships](http://www.gradstudies.fsu.edu/Funding-Awards/Graduate-School-Fellowships). Applications should be submitted through the office of the Biomedical Sciences Ph.D. Program.
II.4. Course and Credit Requirements

Transfer of Course Credits from Other Institutions: Courses taken at another institution cannot substitute for Program core courses and normally do not confer official credit towards the Ph.D. degree. Courses from other institutions may contribute otherwise to the overall training program of a student and be listed on the official Program of Study form, however, whether they are transferred with credit or not. One graduate-level course from another institution may satisfy one Program elective requirement of a student, at the discretion of his/her Supervisory Committee. See the current Florida State University Graduate Bulletin for regulations on official transfer of course credit from another recognized graduate school to be listed on a student’s Florida State University permanent record. Grades earned at another institution cannot be used to improve a grade point average at the Florida State University.

Approval of Credits from Florida State University Courses taken prior to admission: Graduate courses completed at FSU with a B grade or better normally will be approved for credit towards course requirements in the Biomedical Sciences Ph.D. Program. Students should formally petition the Program in writing to receive approval of credit for courses taken prior to admission.

II.5. Dissertation Preparation and Defense

Dissertation research is expected to be original and to make a significant contribution to the scientific discipline as judged by scientific peers. Students are expected to submit their dissertation research for publication in peer-reviewed journals prior to completing the dissertation. The dissertation becomes a published document and serves as a compendium of the background, aims, experimental strategies and results, and significance of the dissertation research. Standards for the detailed format of the dissertation are specified by the University. See the Graduate School website for details on dissertation preparation and review, and other requirements for graduation: http://www.gradstudies.fsu.edu/.

Students should enroll in IHS 8970: Dissertation Defense (1) in the semester in which they intend to defend the dissertation.

A supervisory committee's judgments on the quality of a student's thesis or dissertation should be based solely on the academic merits of the work before them. Any other standard risks a breach of professional ethics or law and undermines the integrity of the process and those involved. Any conflicts of a personal or financial nature (e.g. involving the major professor, committee members, and/or student) that may create the perception of bias in that process must be avoided. This would not include the typical practice of hiring a student on a university assistantship in the home unit, but would include the student being hired by the major professor’s private company. If any such conflicts of interest do exist, they should be reported to the administrative head of the student’s academic unit, who will evaluate same for potential harm and take appropriate action.

IMPORTANT NOTES:

1. Students are advised to plan well in advance for completing graduation requirements. The dissertation must be successfully defended and approved by the Graduate School at

Biomedical Sciences Graduate Student Handbook Page 23
least four (4) weeks prior to the end of the semester in which a student intends to graduate.

2. At least two weeks prior to the date of the defense, the student must present an announcement of the dissertation title and the date and place of the examination to The Graduate School. [http://netprod.oti.fsu.edu/Defense_Announcement](http://netprod.oti.fsu.edu/Defense_Announcement). Consult the Registration Guide for the deadline dates. [http://registrar.fsu.edu/dir_class/apdefault.htm](http://registrar.fsu.edu/dir_class/apdefault.htm).
III. Use of technology during the dissertation defense: All committee members and the student must attend the entire defense in real time, either by being physically present or participating via distance technology. Individual departments may impose stricter requirements on physical attendance, e.g., all members must be physically present. Departments and other degree-granting programs must publicize their policy on defense attendance in their Graduate Student Handbook and in the relevant section of the Graduate Bulletin. If exceptional emergency circumstances, e.g. medical or other emergency situations prevent the participation of a committee member then it may be necessary to arrange for an additional appropriately qualified colleague to attend the defense. A minimum of four members with Graduate Faculty Status must participate.

II.6. Elective Courses
The Program requires that a minimum of three elective courses (9 credit hours) be included in the Program of Studies. Students are encouraged to complete these courses during the second year in residence if the schedule of course offerings allows. The minimum number of elective course hours should be satisfied before Admission to Candidacy. Elective courses can be selected from offerings in the College of Medicine or from graduate or selected senior undergraduate (4000) level courses in FSU departments in the life or physical sciences. A list of approved courses offered by other departments is included in the Appendix II.

II.7. Employment Outside the Program
Graduate studies should be engaged as a full-time endeavor except under extraordinary circumstances. Students who are supported on a full value fellowship or assistantship are considered to be fully engaged and are not permitted to hold employment outside the Program. Small, non-recurrent tasks for which compensation is received, such as occasional tutoring, are permitted.

II.8. English-Speaking Policy
The ability to communicate in spoken English is a necessary component of training in this graduate Program in Biomedical Sciences. Entering international students who do not appear to be sufficiently fluent in English to be effective learners will be required to take remedial actions. A student who does not become competent in spoken English is unlikely to perform well in classes and will not be able to successfully complete Program requirements such as seminar presentations, teaching and the Qualifying Examinations. The University requires that students who are teaching assistants meet established standards for English speaking and comprehension consistent with the teaching assignment. Failure to meet these requirements will disqualify a student from participating in teaching opportunities.

The Department values the enrichment provided by international students in the program and understands when international students are not fluent in English upon their arrival to FSU. All international graduate students who are not native speakers of English should take the SPEAK (Speaking Proficiency English Assessment Kit) test upon arrival to campus. The SPEAK test is administered by the Center for Intensive English Studies to international students who have been appointed or will be appointed as teaching assistants in an academic department at Florida State University.
University. (Students who scored a 26 or higher on the speaking portion of the IBTOEFL are exempt from this requirement). Students must score a 50 or above on the SPEAK test in order to
participate in teaching. If this score is not attained it will be necessary for the student to enroll in English competency courses in order to improve their skills and the SPEAK test will need to be retaken until the required score is achieved. For more information about the SPEAK test and remedial English courses please visit: http://cies.fsu.edu/itap/speak_exam.php

II.9. Enrollment Requirements

The Program and University considers all graduate students to be full-time students and requires each student to register for 9 hours in the fall, spring and summer semesters. University regulations and liability clauses require such enrollment practices. Exceptions are made only for students who are not financially supported by Program or University funds and are in their final term prior to graduation (see below).

Unsupported student in final term: An unsupported student in his/her last term, whose only task is the writing of his/her dissertation or thesis, may petition the Graduate Program Committee to register for a reduced load. This action should be taken before the semester begins. A minimum 2-hour load generally applies to students who are still on campus and are utilizing Departmental facilities. In no case should a student registered for fewer than 2 hours continue to perform research. Only one term of a reduced load is permitted, hence students who have not completed the defense of their dissertation or thesis during the term in which they are registered for a reduced load must adhere to the 9 hour per semester minimum in all subsequent terms.

II.10. Evaluations—Annual Performance

Graduate students are expected to perform at a high level and will be reviewed annually for continuation in the Graduate Program. Poor performance and unprofessional behavior are grounds for dismissal from the Program. An annual review of the performance of each student is required by the University. Performance review of students after their first year is the responsibility of the Graduate Program Committee. Evaluation after the end of the first year is based primarily on performance in courses and rotations.

Reviews after the second and successive years are performed by the Major Professor and the Supervisory Committee as well as the Graduate Program Committee. An annual performance evaluation should be conducted before the end of each spring semester. Prior to the annual evaluation, the student in his or her second or successive years should provide the Supervisory Committee with a written summary of activities using the Annual Progress Report form provided in the Appendix. This written report serves as a basis for discussions between the student and Committee, and a final Committee evaluation. The student summary of activities and a written evaluation prepared by the Committee should be signed by the student and Supervisory Committee members and submitted to the Program Director by March 30.

Unsatisfactory Progress: Participation of a graduate student in the Graduate Program is predicated on satisfactory progress towards the degree and consistent demonstration of Professionalism. Students may be dismissed with ‘due cause’. ‘Due cause’ must be based on a record of unsatisfactory progress documented in the annual and any interim evaluation(s) of the student,
including failure to complete clearly defined and achievable performance objectives. The Major Professor and Supervisory Committee participate in setting objectives, annual evaluations and final decision processes; and are expected to assure that acceptable standards of due
process and fairness are met. If the Supervisory Committee concludes from the annual evaluation that a student is making unsatisfactory progress, then performance objectives for the next semester or year, as judged appropriate, should be established by the Supervisory Committee and communicated to the student and the Graduate Program Director in writing. The Program Director may participate in these proceedings as an ex officio member of the Supervisory Committee. Subsequent ‘Unsatisfactory’ evaluations may serve as a basis for withdrawal of student financial support and assignment to a different Major Professor, withdrawal of Doctoral Candidacy status with an option for an M.S. degree (see sections below) or dismissal from the Program.

II.11. Fees on Registration

Your stipend and tuition are paid through College of Medicine offices, regardless of funding source. Student fees, however, must be paid directly by you each semester. University practices do not allow direct payment of student fees by the College. For this reason your biweekly stipend is increased by an amount that, by year end, will compensate you for the cost of fees you incurred during the year. You must budget accordingly so that you can pay fees due each semester on time. The Program cannot reimburse you for any penalties incurred for late payment of normal fees or late registration. You are also responsible for costs of services such as parking and healthcare. See University sources on these matters.

Please note that all pending penalty or other fees MUST be paid before you can register for the upcoming semester.

II.12. Florida Residency Status

Out-of-state tuition is charged to the Program for all first year students who are not Florida residents. Students with US citizenship who are not Florida residents are expected to apply for Florida residency as soon as they are eligible for in-state tuition. International students are not eligible for Florida residency or in-state tuition by current Florida law. All students who are eligible for Florida residency MUST meet with the Academic Program Specialist upon arrival to begin filing the appropriate paperwork. Failure to apply for in-state residency will require the student to be held responsible for future out-of-state tuition costs.

II.13. Healthcare

Care for common maladies is available at the University Health Services Health & Wellness Center on the FSU main campus. The University requires that students provide proof of health insurance. Students who do not already have health insurance must purchase health insurance coverage and are eligible for limited financial aid. Please see the FSU Graduate Handbook or contact The Graduate School for details.

II.14. Laboratory Rotations

Admitted students should plan to meet with prospective rotation faculty during orientation week.
Each student will do one rotation during the fall semester. The Program Committee and student will work to match up admitted students and rotation mentors.
Students are expected to submit a brief report of their research activities during the rotation period before the end of the fall semester to the Academic Program Specialist (Christina Childers). Faculty supervisors provide a brief evaluation of each student’s performance during the rotation period. Supervisor evaluations are components of the annual review of first year students.

During the fall semester, students should identify at least one additional laboratory in which to rotate during the spring semester. Additional rotations are permitted as necessary. After completing at least two rotations the student, in consultation with the Program Director, should identify a Major Professor. Reports should be submitted for all rotations.

II.15. Major Professor

Major Professor Role and Selection: The Major Professor is the principal advisor and mentor of a graduate student. A student’s choice of Major Professor has a substantial influence on his or her graduate training, field of expertise, satisfaction with the training experience, and ultimate employment.

Some students may have adequate expertise and focus to permit selection of a major professor upon admission to the Program. For all students, the Program encourages a thoughtful and deliberate approach to selecting a Major Professor. Laboratory rotations, the research techniques course and department seminar programs provide valuable means for students to become familiar with potential Major Professors.

A Major Professor should be selected by the end of the first year of graduate training. A formal notification form available from the Graduate Program Office and signed by the student and Major Professor should be used to report the choice of Major Professor to the Director and Academic Program Specialist (Christina Childers).

Change of Major Professor: Students have the right to change Major Professor in the event they believe there is irreconcilable disagreement or incompatibility. Students are advised that the earlier such a decision is made, the better for all parties, and that such a change may delay completion of the Ph.D. degree requirements.

II.16. Minimum Grade Point Average

The University requires that graduate students maintain a minimum grade point average (GPA) of 3.0 in order to remain in good academic standing. A student whose aggregate GPA falls below 3.0 in a given semester will be placed on academic probation for the following semester. Failure to improve the GPA to 3.0 or better in the subsequent semester is cause for automatic dismissal from The Graduate School and Program unless there are extenuating circumstances. Students who anticipate that their GPA may fall below a 3.0 should consult with the Program Director and Major Professor (if selected) prior to registering for the subsequent semester to determine the best course of studies to remedy the GPA deficiency.
II.17. Program of Studies

The Supervisory Committee, in consultation with the Major Professor and student, determines the Program of Studies the student shall complete prior to Admission to Ph.D. Candidacy. The Program of Studies consists of the required and elective courses that constitute effective graduate training in the student’s chosen specialty as mutually agreed upon by the student and Supervisory Committee. The Program of Studies commonly includes graduate courses from other departments in the University, and in some cases may include courses beyond the minimum nine credit hours of electives to satisfy training needs of the student’s research specialty. The Program of Studies should be reported to the Graduate Program Office on the form provided when registering for spring courses in year two. The student should strive to complete the courses specified in the Program of Studies by the end of the second year in residence, but may be required to extend the time to completion into the third year because of limited course availability.

II.18. Publication of Dissertation Research

Students are strongly encouraged to publish research findings throughout their graduate training. Students entering in August 2010 or later are required to publish at least one peer-reviewed manuscript describing a significant aspect of their dissertation research prior to graduation. Evidence of acceptance of the manuscript by the Editor shall be considered to constitute ‘publication’ for the purposes of this requirement.

II.19. Qualifying Examinations and Admission to Candidacy for the Ph.D. Degree

All students seeking the Ph.D. degree must pass Qualifying Examinations before they can receive Admission to Candidacy for the Ph.D. degree. The Ph.D. Program in Biomedical Sciences administers this examination in two parts. Part I is a comprehensive exam consisting of written component that will be followed up by an oral defense of the written responses within the same semester. The written comprehensive examination is conducted within the sixth semester in residence, normally the summer semester of the second year. Part II consists of the development of a dissertation research proposal that is also orally defended prior to approval by the Supervisory Committee. This should be completed no later than Spring of the third year. The dissertation research proposal should be submitted in writing and presented orally by the end of the seventh semester in residence, normally the fall semester of the third year. This schedule for completing the Qualifying Examinations may be extended by the Supervisory Committee due to extenuating circumstances, but all students are expected to attempt both parts of the Qualifying Examinations within the third year of residence. A student who has not completed the Qualifying Examinations by the end of the summer semester of the third year in residence may be dismissed from the Ph.D. Program for failure to make adequate progress towards the degree, subject to review by the Program Director and Graduate Program Committee in consultation with the Supervisory Committee. Students should register for IHS 5503. Proposal Development (1) and IHS 8960. Preliminary Doctoral Examination (0) in the semester in which they plan to defend their dissertation proposal, completing the Qualifying Examination.
Students attempting either part of the Qualifying Examination may receive a Pass, Partial Pass, or Fail as described below. A student who has received a ‘Pass’ on both parts of the Qualifying Examination will be advanced to Candidacy for the Ph.D. Degree in Biomedical Sciences.
Students who are admitted to Ph.D. Candidacy are eligible to register for IHS 6980. ‘Dissertation Research’ in subsequent semesters.

Part I: The comprehensive examination part of the Qualifying Examinations is designed to assess the student’s ability to comprehend and integrate knowledge obtained in formal course work, knowledge relevant to his or her field of specialization gained through experience or assigned readings, and knowledge of major advances as presented in special topic courses and required seminars. The student’s Supervisory Committee composes and administers the comprehensive examination portion of the Qualifying Examinations. The exact format of the examination is determined by the Supervisory Committee and may consist entirely of closed book questions or a mixture of closed book and open book questions. The Supervisory Committee as a whole determines the general content and format of the examination questions and provides the student with guidance on preparation for the examination questions. After all written questions are completed, the Supervisory Committee will assess the student’s performance on the examination and meet with the student to ask for clarifications and pose additional questions to the candidate.

Possible outcomes of the comprehensive examination

Pass: The student is considered prepared to continue work towards completion of the Qualifying Examinations and should complete a dissertation proposal before the end of the spring semester of the third year. The student should register for IHS 5503. Proposal Development. (1). (S/U grade only.) in the semester intended for presentation of the dissertation proposal.

Partial Pass: If deficiencies were noted in a minority of responses, then the Supervisory Committee will make recommendations to the Graduate Program Committee for remedy of these deficiencies. Remedies depend on the degree of deficiency and may consist of assignments such as retake of examination question(s), writing a paper, presentation of a seminar, or completing a course with a grade of B or better. The Graduate Program Committee will review the student’s performance on the examination and prior performance in the Program and may accept, modify or reject the recommendation of the Supervisory Committee. If necessary, the Graduate Program Committee will meet with the Supervisory Committee and reach a consensus on subsequent action if the initial recommendation is not accepted. Remedies must be completed within the allotted time or the student will not be permitted to continue towards the Ph.D. degree. After the remedy is completed successfully the student should complete a dissertation proposal before the end of the spring semester of the third year and register for IHS 5503. Proposal Development. (1). (S/U grade only.) that semester.

Fail: The Supervisory Committee will review the full record of a student failing a majority of the examination and make a recommendation for dismissal or for retention as a candidate for a Master’s in Science (M.S.) to the Graduate Program Committee. The Program Committee may accept, modify or reject the recommendation of the Supervisory Committee. If necessary, the Graduate Program Committee will meet with the Supervisory Committee and reach a consensus on subsequent action if the initial recommendation is not accepted. Possible final actions are

(a) approval to continue in the Graduate Program towards completion of a thesis M.S. degree. (may require laboratory work to complete thesis research)
(b) approval to continue in the Graduate Program towards completion of a course-work M.S. degree (may require additional course work or other assignment), or
(c) Dismissal from the Graduate Program.

Students should consult the Academic Program Specialist for details of requirements for the thesis and course work M.S. degrees.

**Part II: The Dissertation component of the Qualifying Examinations** consists of the composition, presentation and defense of an original research proposal that will represent the research plan for the dissertation project.

The student should register for IHS 5503. Proposal Development. (1). (S/U grade only.) in the semester that the proposal will be prepared and defended, normally by the spring semester of the third year.

The requirement for writing and presentation of the dissertation proposal is designed to assess the student's preparedness for and abilities to perform valid and meaningful scientific research. These abilities include, but are not limited to, the following:

- integration of concepts and knowledge in conceiving a scientifically viable and significant research proposition,
- selection and critical evaluation of the literature,
- application of knowledge of techniques appropriate to the proposed research and their limitations,
- demonstration of communication skills, including basic writing skills and the practice of sound scientific style in written and oral communications.

**Possible results of assessment of the dissertation proposal presentation** are (i) Pass, (ii) Re-Examine, or (iii) Fail. The Supervisory Committee is responsible for setting re-examination conditions. The student may make two attempts to pass, but the Supervisory Committee is responsible for deciding between a Fail and a Partial Pass, which can be made up to a full Pass in a specified manner.

The Supervisory Committee will review the full record of a student failing the examination and make a recommendation for action to the Graduate Program Committee. Recommendations may be for

(a) approval to continue in the Graduate Program towards completion of a thesis M.S. degree (may require laboratory work to complete thesis research),
(b) approval to continue in the Graduate Program towards completion of a course-work M.S. degree (may require additional course work or other assignment), or
(c) dismissal from the Graduate Program.

**Format of the Dissertation Proposal**

The student is responsible for scheduling the presentation date with the supervisory committee. A two hour period should be scheduled for the presentation and assessment. The examination period consists of two parts, a 30-40 minute oral PowerPoint presentation of the proposal by the student, followed by a questioning period. Two weeks prior to the examination date the student should submit to each member of the Supervisory Committee a copy of the proposal. The dissertation
The dissertation proposal should contain the following elements. Each element should not exceed the length limitation indicated in parentheses ( ). Print text (excepting References) in using 12 point Times New Roman or other easily readable font. Supporting figures can be included and will not be counted towards the length limitations, but should be kept to an essential minimum.

- **Summary** (250 words). Summarize the overall project goals, specific aims, and general experimental approach.
- **Statement of Specific Aims** (1 page). Outline the specific questions that will be addressed or information that will be sought. Include hypothesis statements.
- **Background--Work by others** (2-3 pages). Concisely review the literature so that the reader has a clear perception of both the general significance of the project and the observations most pertinent to the specific aims described below.
- **Preliminary Data--Work by the Student** (1-2 page). Briefly summarize any preliminary data (this is typically unpublished data from your own lab) that relates directly to your specific aims.
- **Experimental Approaches and Procedures** (6-7 pages). Describe the overall experimental approaches to the above aims and give the rationale for these approaches. Do not describe experiments as you would in a Methods section of a paper.
- **References Cited** (80 citation limit. Give full citations, including titles. Print in 10 point, Times New Roman.) Students are strongly encouraged to use the NIH Medline databank for literature searches and bibliographic software like Endnote.
II.20. Seminar Attendance and Presentations

Seminar attendance: Students are required throughout their graduate training to attend the following Department and College seminars and to register for the corresponding courses indicated below if sufficient credit hours are available after registering for other courses required in that semester. The requirement for enrollment in seminar courses will be waived for a Ph.D. Candidate who intends to graduate in the current academic year and otherwise is not able to accumulate the minimum of 24 credit hours of Dissertation Research.

Seminar schedules are posted on the COM website and Department bulletin board.

IHS 5935. Health Sciences Seminar (1). (S/U grade only.) This College-wide seminar series, commonly known as ‘Grand Rounds,’ is offered in the fall and spring semesters at 4:00 p.m. on the second Thursday of the month from September to April. The Grand Rounds seminar series provides graduate students with exposure to contemporary research and clinical practice issues in medicine.

BMS 6936. Seminar in Biomedical Sciences (1-2). (S/U grade only.) The seminar program of the Department of Biomedical Sciences is normally held at noon on Wednesday during the fall and spring semesters. The Department hosts a variety of academic and industrial speakers covering contemporary topics in biomedical sciences.

Specialty Seminars: Students are also encouraged to attend available seminar program in their specialty in the Department of Biomedical Sciences or other campus graduate Departments or Programs.

Seminar presentations: Students are required to present at least one departmental seminar on their research prior to graduation. In addition the student must also present their research (poster or oral) at a national scientific meeting.

II.21. Supervisory Committee (4+ members; at least 3 Biomedical Sciences Members)

The Supervisory Committee plays an important role in the training of a graduate student as both a mentoring and evaluation body (see also sections on Program of Studies and Annual Evaluations). The Supervisory Committee is chosen by the student in consultation with the Major Professor. All doctoral committees are to be composed of a minimum of four members who have Graduate Faculty Status (GFS). Included among these four members will be the University Representative who must hold GFS, and must also be a tenured member of the faculty. Additional members of the committee, beyond four, maybe non-tenure track faculty holding Co-DDS or Co-MDS. Committees that were formed prior to August 24, 2009, which undergo changes, may be required to comply with the new standards. Choice of committee members should be made as soon as practical, but not later than the end of the semester after selection of the Major Professor, normally by the end of the summer semester of the first year in residence. A formal
notification form signed by the student and Committee members should be used to report the choice of Committee membership and Program of Studies to the Director and Graduate Program Committee (see Appendix).
Appendix I. College of Medicine Graduate Courses

Biomedical Sciences (BMS, GMS prefix)

BMS 5935. Advanced Topics in Biomedical Sciences (1-2). (S/U grade only.) A seminar-based course in which students in the Ph.D. Program in Biomedical Sciences present seminars on current research from the literature on topics developed under the guidance of faculty members. Students will critically read, analyze, and present current research. May be repeated a total of eight (8) semester hours.

BMS 5525. Bioregulation (4). Prerequisite: PCB5595. Letter Grade (A-F). An advanced, lecture-based course emphasizing the molecular basis of regulation in biological systems. An important component is s t u d y o f the design and interpretation of experiments leading to current understanding of regulation of gene expression. The course relies on the contemporary research literature, and focuses on specific model organisms and current problems that illustrate experimental approaches used to investigate different aspects of the control of gene expression.

BMS 5905. Directed Independent Study in Biomedical Sciences (1-12). (S/U grade only.) An individualized research course intended for students in the Ph.D. Program in Biomedical Sciences prior to passing the Qualifying Examinations. May be repeated a maximum of fifty-four (54) semester hours.

BMS 5185. Research Opportunities in Biomedical Sciences (1-6). (S/U grade only.) Provides entering students in the Ph.D. Program in Biomedical Sciences opportunities to be informed of and receive training in research by rotating through laboratories in the Department of Biomedical Sciences. Students must complete at least two (2) laboratory rotations. Currently students should register for two (2) semester hours of credit for the spring semester in the first year of the Program.

BMS 5186C. Research Techniques in Biomedical Sciences (2-4). Prerequisites: PCB5595, PCB5137, BMS5525 (Bioregulation). An advanced laboratory course for students in the Ph.D. Program in Biomedical Science providing training in laboratory techniques and experimental approaches essential to contemporary molecular biology and biochemistry research.

BMS 5931. Graduate Tutorial in Biomedical Sciences (1). This course involves selected topics in contemporary Biomedical Sciences along with reading and analysis of primary literature. Topics to be covered will address questions of developmental, cell and molecular biology related to human health.

BMS 6936. Seminar in Biomedical Sciences (1-2). (S/U grade only.) A seminar series in current topics in biomedical sciences. May be repeated a total of sixteen (16) semester hours for credit.

BMS 5122. (1-2). Insights into Human Congenital and Developmental Disorders (3). Letter Grade (A-F). This course is an advanced biomedical sciences course for graduate students to introduce the molecular basis of human congenital and developmental disorders. This course consists of three topics which cover genomic instability and cancer development, stem cells and their application in disease treatment, and neurodevelopmental disorders.

GMS 5095. Modeling Human Disease. (3). Letter Grade (A-F). Advanced biomedical sciences course for Ph.D. students or for upper level undergraduate students. This course will involve lectures and student-driven presentation and discussion. Students will learn how to critically evaluate the scientific literature, and how to use model systems for experimental research.

GMS 5098. Critical Review of the Scientific Literature, (1-2). (S/U grade only). This course is an advanced biomedical sciences course for PhD students. This course revolves around student-driven presentations and discussions of the primary research literature. Students learn how to evaluate the scientific literature in their own field. Issues such as authorship, funding sources, citation index, journal quality, etc. are introduced as criteria for judgment.

GMS 5222. Chromatin Structure, Epigenetics and Human Health (3). Letter Grade (A-F). This course is an

Biomedical Sciences Graduate Student Handbook
advanced biomedical sciences course for graduate students to introduce the recent developments in
chromatin and epigenetics research in the context of human health. The course involves lectures and student-driven presentation and discussion.

**GMS 5303. Molecular Mechanism of Common Human Diseases (3).** Letter Grade (A-F). This course will introduce modern biomedical research. The students will gain knowledge of the most common human diseases and their molecular pathology. In addition, the attempts to find the cure and the challenges that lay ahead will be discussed.

**GMS 5304. RNA Silencing and Disease (3).** Letter Grade (A-F). This course explores mechanisms of RNA silencing by the different classes of small RNAs. Topics discussed include how small RNAs are generated, the proteins involved, how small RNAs regulate chromatin formation, gene expression and how they are involved in cancer and disease.

**GMS 5905. Directed Individual Study (1-3).** (S/U grade only). Prerequisite: Instructor permission. Study on a selected topic as designated by the student or directing professor. May be repeated to a maximum of nine (9) semester hours.

**GMS 6001. Special Topics in Biomedical Sciences (1-3).** (S/U grade only.) An expert, lecture-based course focusing on recent advances and outlooks in biomedical science research. Course offerings include but are not limited to such topics as aging, biotechnology, bioinformatics, developmental biology, genomics and proteomics, molecular signaling, neuroscience and physiology. The general emphasis is on the molecular, genetic and cell biology aspects of these topics. May be repeated a total of sixteen (16) semester hours.

**GMS 6097C. Biomedical Sciences Research (3).** Laboratory course designed to provide students with individualized instruction in specific experimental strategies and methods important in their chosen specialty area of biomedical research training. May be repeated a total of twelve (12) semester hours.

**Integrated Health Sciences (IHS)**

**IHS 5905. Directed Individual Study in Health Sciences (1-12).** (S/U grade only). A course for graduate students who wish an individualized research experience in Biomedical Sciences, Medical Humanities and Social Sciences, Public Health or other fields represented in the College of Medicine. Students receive laboratory or other training in research methods and improve their readiness for and appreciation of research in health-related science. May be repeated a maximum of thirty-six (36) semester hours.

**IHS 5515. Ethics and Professional Integrity in Research (1).** (S/U grade only). A required course for students in the Ph.D. Program in Biomedical Sciences. This course provides a survey of three broad areas of research ethics: issues raised by using animals in research, using people in research, and by the scientific method itself. The course presents examples of ethical decisions faced in medical research, including (but not limited to) ascribing credit for contributions in publications, consequences of plagiarism and fraudulent data, access to genetic data, confidentiality, institutional review boards and considerations in research involving animal or human subjects.

**IHS 5935. Health Sciences Seminar (1).** (S/U grade only) Seminar program for graduate students in the Ph.D. Program in Biomedical Sciences and other health-related programs. Biomedical Sciences students are required to enroll each Fall and Spring semester. May be repeated a total of twelve (12) semester hours for credit.

**IHS 5503. Proposal Development.** (1) (S/U grade only.) Individualized instruction on development of a dissertation proposal and other proposals for research projects in biomedical sciences according to standards of external granting agencies such as NIH and NSF. Components of proposal writing addressed include strategies of successful proposals; designing hypothesis-driven research; review processes and expectations; setting reasonable goals; definitions and importance of specific research aims; necessary and sufficient background documentation; describing experiment design and methods. May be repeated a total of two (2) semester hours for credit.
IHS 5933. Seminar on Medical Science Education (1). (S/U grade only.) Prerequisite: Limited to graduate students in the College of Medicine. Preparation for supervised teaching and education outreach experiences. Topics include approaches to conduct of classes and laboratories, exam construction, ethics in teaching, legal and safety issues for instructors, and effective written and oral communication.

IHS 5945. Supervised Teaching (1-5). (S/U grade only.) Students in the Ph.D. Program in Biomedical Sciences are required to register for a minimum of two (2) semester hours before graduation. May be repeated for a total of (5) semester hours.

IHS 6980. Dissertation Research (1-12). (S/U grade only.) Ph.D. candidates in Biomedical Sciences should register for this course after passing the Qualifying Examinations. A minimum of twenty-four (24) Dissertation hours is required for graduation.

IHS 8970. Dissertation Defense (0). (S/U grade only.) Oral defense of dissertation research. One-time registration during the term in which student expects to defend their Ph.D. dissertation.

IHS 8960. Preliminary Doctoral Examination (0). (S/U grade only.) Oral examination and defense of the doctoral proposal; successful completion allows advancement of the student to Ph.D. candidacy.

Appendix II: Graduate Elective Courses Offered in Other Colleges

The following graduate courses are approved choices to satisfy the Program requirement for nine (9) credit hours of elective courses. Additional courses may be eligible for electives at the discretion of the Supervisory Committee. See the Graduate Bulletin of the Florida State University at http://registrar.fsu.edu/bulletin/grad/ for a complete listing of graduate courses. Students are advised that many departments offer special topics courses at irregular intervals. These courses may not be well advertised, but can be discovered by checking directly with the graduate offices of other departments in the life sciences.

Chemistry & Biochemistry

BCH 5505. Structure and Function of Enzymes (3). Pre- or co-requisite: BCH 4053 or equivalent. Course addresses elements of protein structure and structural motifs, structure determination methods; protein folding and stability; enzyme kinetics and mechanisms; structure-function relationships.

BCH 5745. Chemical and Physical Characterization of Biopolymers (3). Pre- or co-requisite: BCH 4053 or equivalent. Course covers biopolymer types and conformations; solution properties of biopolymers; macromolecular equilibria; hydrodynamic behavior; determination of size and shape; biopolymer separations; introduction to biological spectroscopy.

BCH 5886r-5887r. Special Topics in Biochemistry and Cell Biology (one to three [1-3] hours each). Each course may be repeated to a maximum of twelve (12) semester hours or a total of four times.

CHM 5506. Physical Chemistry of Macromolecules I (3). Prerequisite: Two semesters of physical chemistry or consent of instructor. Course covers conformational statistics of random coil polymer chains; ordered polymer structures and order-disorder transitions; thermodynamics of polymer solutions; structure-property relationships of polymers. Cross listed under physical chemistry.

CHM 5507. Physical Chemistry of Macromolecules II (3). Prerequisite: Two semesters of physical chemistry or consent of instructor. Course addresses principles and applications of spectroscopic methods to polymers and biological macromolecules including electronic, vibrational electron spin and nuclear magnetic resonance spectroscopy; and spectroscopic studies of dynamic systems. Cross listed under physical chemistry.

Biological Science
BSC 5409. Biophysical Principles of Biological Techniques (3). This course analyzes physical principles behind modern laboratory methods used in biological research.

MCB 5936r. Selected Topics in Microbiology (1-4). May be repeated to a maximum of sixteen (16) semester hours.

PCB 5137. Advanced Cell Biology (3). Principles of cell organization; membrane structure and transport; cytoskeleton; signaling; organelle structure and function; energy metabolism; cellular aspects of cancer and immunity.

PCB 5595. Advanced Molecular Biology (3). Prerequisites: PCB 4024 or PCB 5525 (molecular biology) or instructor permission. Gene regulation and its relationship to differentiation and development.

PCB 5785. Biology of Muscle (3). Prerequisites: BCH 4053; PCB 3743. Muscle biophysics, biochemistry, and physiology; an emphasis on contractile function, experimental methods, and specialization of muscular systems in vertebrates and invertebrates.
PCB 5795. Sensory Physiology (3). Prerequisite: Mammalian physiology I or general physiology/cell biology background. Mechanisms of sensory transduction; higher level processing of sensory information; comparative aspects of sensory physiology.

PCB 5835. Neurophysiology (3). Prerequisite: Mammalian physiology I or general physiology/cell biology background. Membrane biophysics; molecular aspects of cell excitability; advanced cellular neurophysiology.

PCB 5846. Neurocytology and Neurochemistry (4). Morphological, molecular, developmental, and phylogenetic relations to nerve tissues.

PCB 5936r. Selected Topics in Genetics and Cell Biology (1-4). May be repeated to a maximum of sixteen (16) semester hours.

PCB 5937r. Selected Topics in Physiology (1-4). May be repeated to a maximum of sixteen (16) semester hours.

PCB 6155C. Microscopy and Electron Microscopy for the Biologist (3). Permission of instructor required prior to registration.

Neuroscience

PSB 5057. Neuroscience Methods: Molecules to Behavior (2). (S/U grade only.) This course exposes graduate students to a broad array of current techniques and methodologies in the neurosciences from a molecular to behavioral level of analysis.

PSB 5077. Responsible Conduct of Research (2). (S/U grade only.) This course is an introduction to survival skills and ethics in scientific research. The focus is on basic principles of scientific conduct and practice for graduate students pursuing careers in biomedical research.

PSB 5341. Systems and Behavioral Neuroscience (4). This course covers integrated neural systems that ultimately lead to the behavior of organisms. Topics include fluid and energy balance, reproduction, sleep, emotions, cognition and neurological disorders.

PSB 6070r. Current Problems in Neuroscience (2). (S/U grade only.) Detailed examination of a current area of neuroscience research. May be repeated to a maximum of eight (8) semester hours.

Statistics

STA 5172. Biostatistics (3). This course introduces students to the statistical methods used in studying the prevention of disease in human populations.
Appendix III: FORMS

LIST OF FORMS:

I. Graduate Program in Biomedical Sciences Major Professor Selection Form

II. Graduate Course Registration Request Form

III. Program of Studies and Supervisory Committee Membership

IV. Annual Student Review
   a. Student Activities Summary (to be completed by student)
   b. Faculty Evaluation (to be completed by Supervisory Committee)

V. Qualifying Examinations Evaluation

VI. Supervisory Committee Certification of ‘Pass’ of Qualifying Examinations and Admission to Ph.D. Candidacy

VII. Program in Biomedical Sciences Graduation Checklist
Graduate Program in Biomedical Sciences
Major Professor Selection Form
(rev. 5/9/2011)

PLEASE RETURN THE COMPLETED FORM TO THE GRADUATE PROGRAM OFFICE

Student Name: ___________________________ Date: ___________________________

Graduate Students: Use this form to report the selection of your Major Professor.

Faculty Members: Your signature on this form indicates your willingness to serve as the Major Professor of this student and that you will advise them of their Program of Studies.

Major Professor: ___________________________ Signature: ___________________________

FSU College of Medicine Graduate Course Registration Form (rev. 5/13/2015)

Instructions: This form should be completed for registration each semester by all students in the Ph.D. Program in Biomedical Sciences. Students in other Colleges who wish to register for graduate courses in the College of Medicine should also complete this form.

First year graduate students will be registered for all required courses listed in the Student Handbook. The form must be signed by the Director of the Graduate Program.

Second and successive year students should consult with their Major Professor on recommended course selection and recommendations by their Supervisory Committee all students must follow the departmental requirements in the Student Handbook. The form must be signed by your Major Professor.

Completed and signed forms should be submitted to Christina Childers for review. The COM Registrar will register you for courses offered within the College of Medicine. Normally these will have BMS, GMS or IHS prefixes. IMPORTANT NOTE: If you wish to take a course offered in a different college from the COM, then you must use the FSU online registration system.

Graduate Program in Biomedical Sciences
Program of Studies and Supervisory Committee (rev. 8/15/2013)

Graduate Students: Use this form to report the composition of your Supervisory Committee and their approval of your Program of Studies.

Faculty Members: Your signature on this form indicates your willingness to serve on the Supervisory Committee of this student and your approval of his/her Program of Studies.

The Program of Studies is intended to indicate the formal coursework that the student and Supervisory Committee agree are necessary for achieving a level of expertise in the Biomedical Sciences and the chosen subject area of the dissertation research expected of a Ph.D. graduate. Changes in the Program of Studies are permitted with approval of the Supervisory Committee. Report changes of the Supervisory Committee or the Program of Studies on a new form marked “REVISED”.

Supervisory Committee: *Remember that your committee must contain at least three members from Biomedical Sciences. (Neuro-BMS Students follow the Neuroscience Handbook Committee instructions.)

Printed Name Signature
Biomedical Sciences Graduate Student Handbook
Dear Students: Program and University policy requires annual evaluation of graduate student progress. To assist in this evaluation by your committee and the College of Medicine Graduate Program Committee, you will need to complete and submit this form to Jonquil Livingston in the Department Office and to the members of your Supervisory Committee. The deadline for completion of this form is March 1.

Instructions: Please add to this document each year. Be sure not to delete any entries from previous years. A template can be found online on the BMS SharePoint site.

Name: ___________________________ Date: ______________________

1. Program (BMS or Neuro): ____________
2. Year of Entry Into Program: ____________
3. Major Professor: ______________________

4. Committee members (annotate any changes from previous report):
   a. ____________________________
   b. ____________________________
   c. ____________________________
   d. ____________________________

5. Anticipated degree completion date: ______________________

6. Completion date or anticipated completion date for: Comprehensive Examination: ____________
   Dissertation Proposal: ______________________

7. What are your current plans after you complete your PhD:
Please list any of the following activities during the prior academic year:

a. Courses taken and grade:
   1. ____________________________   ______
   2. ____________________________   ______
   3. ____________________________   ______
   4. ____________________________   ______
   5. ____________________________   ______

b. Teaching activities (include mentoring of DIS students):

c. Proposals for Funding Submitted:

d. Manuscripts submitted and/or accepted for publication:

e. Scientific Meetings/Conferences Attended:

f. Research Presentations (include local, regional and national):

g. Leadership and Service Activities:

h. Honors and Awards:
Please list Planned Research and Training Activities for next year:

a. Courses to be taken:
   
   1. 
   2. 
   3. 
   4. 

b. Planned teaching activities (include mentoring of DIS students):

c. Proposals for Funding to be Submitted:

d. Manuscripts to be submitted:

e. Scientific Meetings/Conferences to be Attended:

f. Planned Research Presentations (include local, regional and national):

g. Planned Leadership and Service Activities:

8. Provide a description of your research progress during the previous year. Also, provide a list of specific goals for next year. (One page or less).

9. Do you have an up to date Individual Development Plan?

10. What can the Program do to make your training situation better?
Program and University policy requires annual evaluation of graduate student progress by their Supervisory Committee. Each student is to present Committee members with an Annual Activity Information sheet, then schedule a meeting with the Committee in which the student’s progress is reviewed. After meeting with the student, the Supervisory Committee will discuss the student’s progress and arrive at a consensus evaluation and recommendations. The Major Professor should complete this evaluation form, discuss the evaluation with the student, and then submit this signed form to Jonquil Livingston in the Department of Biomedical Sciences. Annual evaluations should be completed by March 30. Attach additional sheets as needed.

Weaknesses:

Suggestions for Improvement:

Committee Member
SUPERVISORY COMMITTEE CERTIFICATION OF ‘PASS’ OF QUALIFYING EXAMINATIONS AND ADMISSION TO PH.D. CANDIDACY

This form is to be submitted to the Academic Program Specialist each time the student attempts the preliminary examination. This form certifies the results of the student’s preliminary examination.

A signed form with a majority vote of “PASS” (oral or written) must be on file before the student may register for dissertation hours. The Office of the Registrar’s Admission to Candidacy Form should also be submitted at the same time.

If the student passes the exam before the 7th week of the semester the student may request permission of their committee, department chair and academic dean to “switch” current courses enrolled in to dissertation hours for that semester.

Indicating that you plan to request the switch on this document does not guarantee that the request will be approved. Please see policy for procedure and limitations.

Biomedical Sciences Graduate Student Handbook
Program Graduation Checklist
Ph.D. in Biomedical Sciences
(Rev. 7/21/2016)

Checklist for Year 1

____ Attend required departmental seminars for fall and spring semester
____ Complete at least 2 lab rotations and submit lab rotation summaries
____ Select major professor by the end of 1st spring semester
____ Complete required coursework with overall GPA ≥ 3.0
____ Select supervisory committee by end of 1st summer semester
____ Complete annual evaluation signed by committee by March 30

Checklist for Year 2

____ Attend required departmental seminars for fall and spring semester
____ Register for elective coursework during the fall and spring semester with overall GPA ≥3.0
____ Complete annual evaluation signed by committee by March 30
____ Register and complete Preliminary Doctoral Examination IHS 8960(written component)

Summer Semester

Checklist for Year 3

____ Attend required departmental seminars for fall and spring semester
____ Finish elective coursework with overall GPA ≥3.0
____ Register and complete Proposal Development IHS 5503 in spring semester
____ Admission to candidacy departmental approval by supervisory committee. Submit Departmental Candidacy Approval Form, signed by Supervisory Committee, to Program Office upon completion and passing of dissertation proposal defense.
____ Complete annual evaluation signed by committee by March 30

Checklist for Year 4 and 5

____ Attend departmental Seminars for fall and spring semester
____ Present departmental research seminar (not the same as your dissertation defense)
____ Register for Dissertation Research (need minimum of 24 hours before graduation)
____ Thesis, Treatise, Dissertation Research Approval Form must be submitted before the graduation registration deadline, in the semester you plan to graduate.
____ Must have a manuscript submitted to a peer-review journal accepted for publication
____ Complete annual evaluation signed by committee by March 30
____ Present a seminar on dissertation research
____ Present research at a national scientific meeting (poster or oral)
____ Register for Graduation during the semester you plan to defend your dissertation
____ Department notification of successful Dissertation defense
Appendix IV: The Florida State University Academic Honor Policy

THE FLORIDA STATE UNIVERSITY ACADEMIC HONOR POLICY

Introduction
The statement on *Values and Moral Standards* says: “The moral norm which guides conduct and informs policy at The Florida State University is responsible freedom. Freedom is an important experience which the University, one of the freest of institutions, provides for all of its citizens - faculty, students, administrators, and staff. Freedom is responsibly exercised when it is directed by ethical standards.” ([Values and moral standards at FSU](http://registrar.fsu.edu/) retrieved from the current General Bulletin)

The statement also addresses academic integrity: “The University aspires to excellence in its core activities of teaching, research, creative expression, and public service and is committed to the integrity of the academic process. The [Academic Honor Policy](http://registrar.fsu.edu/) is a specific manifestation of this commitment. Truthfulness in one’s claims and representations and honesty in one’s activities are essential in life and vocation, and the realization of truthfulness and honesty is an intrinsic part of the educational process.” ([Values and moral standards at FSU](http://registrar.fsu.edu/) retrieved from the current General Bulletin)

Guided by these principles, this Academic Honor Policy outlines the University’s expectations for students’ academic work, the procedures for resolving alleged violations of those expectations, and the rights and responsibilities of students and faculty throughout the process. The Academic Honor Policy Committee may take direct jurisdiction of any case under extraordinary circumstances when it is determined by a majority vote of the committee that taking direct jurisdiction is appropriate.

Students in the College of Law and the College of Medicine are governed by the academic integrity policies and procedures of their respective colleges, which are subject to approval by the Academic Honor Policy Committee.

**FSU Academic Honor Pledge**
I affirm my commitment to the concept of responsible freedom. I will be honest and truthful and will strive for personal and institutional integrity at The Florida State University. I will abide by the Academic Honor Policy at all times.

**Academic Honor Violations**
Note: Instructors are responsible for reinforcing the importance of the Academic Honor Policy in their courses and for clarifying their expectations regarding collaboration and multiple submission of academic work. Examples have been provided for the purpose of illustration and are not intended to be all-inclusive.
1. PLAGIARISM. Presenting the work of another as one's own (i.e., without proper acknowledgement of the source).
   Typical Examples Include: Using another's work from print, web, or other sources without acknowledging the source; quoting from a source without citation; using facts, figures, graphs, charts or information without acknowledgement of the source.
2. CHEATING. Improper access to or use of any information or material that is not specifically condoned by the instructor for use in the academic exercise.
   Typical Examples Include: Copying from another student's paper or receiving unauthorized assistance during a quiz, test or examination; using books, notes or other devices (e.g., calculators, cell phones, or computers) when these are not authorized; procuring without authorization a copy of or information about an examination before the scheduled exercise; unauthorized collaboration on exams.
3. UNAUTHORIZED GROUP WORK. Unauthorized collaborating with others.
   Typical Examples Include: Working with another person or persons on any activity that is intended to be individual work, where such collaboration has not been specifically authorized by the instructor.
4. FABRICATION, FALSIFICATION, AND MISREPRESENTATION. Unauthorized altering or inventing of any information or citation that is used in assessing academic work.
   Typical Examples Include: Inventing or counterfeiting data or information; falsely citing the source of information; altering the record of or reporting false information about practicum or clinical experiences; altering grade reports or other academic records; submitting a false excuse for absence or tardiness in a scheduled academic exercise; lying to an instructor to increase a grade.
5. MULTIPLE SUBMISSION. Submitting the same academic work (including oral presentations) for credit more than once without instructor permission. It is each instructor's responsibility to make expectations regarding incorporation of existing academic work into new assignments clear to the student in writing by the time assignments are given.
   Typical Examples Include: Submitting the same paper for credit in two courses without instructor permission; making minor revisions in a credited paper or report (including oral presentations) and submitting it again as if it were new work.
6. ABUSE OF ACADEMIC MATERIALS. Intentionally damaging, destroying, stealing, or making inaccessible library or other academic resource material.
   Typical Examples Include: Stealing or destroying library or reference materials needed for common academic purposes; hiding resource materials so others may not use them; destroying computer programs or files needed in academic work; stealing, altering, or intentionally damaging another student's notes or laboratory experiments. (This refers only to abuse as related to an academic issue.)
7. COMPLICITY IN ACADEMIC DISHONESTY. Intentionally helping another to
commit an act of academic dishonesty.
Typical Examples Include: Knowingly allowing another to copy from one's paper during an examination or test; distributing test questions or substantive information about the material to be tested before a scheduled exercise; deliberately furnishing false information.

8. ATTEMPTING to commit any offense as outlined above.

**Student Rights**

Students have the following important due process rights, which may have an impact on the appellate process:

1. to be informed of all alleged violation(s), receive the complaint in writing (except in a Step 1 agreement, described in the Procedures Section, where the signed agreement serves as notice) and be given access to all relevant materials pertaining to the case.

2. to receive an impartial hearing in a timely manner where they will be given a full opportunity to present information pertaining to the case.

Students are also accorded the following prerogatives:

1. when possible, to discuss the allegations with the instructor.

2. privacy, confidentiality, and personal security.

3. to be assisted by an advisor who may accompany the student throughout the process but may not speak on the student’s behalf.

4. to choose not to answer any question that might be incriminating.

5. to contest the sanctions of a first-level agreement and to appeal both the decision and sanctions of an Academic Honor Hearing.

The student has the right to continue in the course in question during the entire process. Once a student has received notice that he/she is being charged with an alleged violation of the Academic Honor Policy, the student is not permitted to withdraw or drop the course unless the final outcome of the process dictates that no academic penalty will be imposed. Should no final determination be made before the end of the term, the grade of “Incomplete” will be assigned until a decision is made. Students should contact the Dean of Students Department for further information regarding their rights.

**Procedures for Resolving Cases**

Step 1. Throughout the Step 1 process, the instructor has the responsibility to address academic honor allegations in a timely manner, and the student has the responsibility to respond to those allegations in a timely manner. For assistance with the Academic Honor Policy, students should consult the Dean of Students Department and instructors should consult the Office of the Dean of
the Faculties.
If a student observes a violation of the Academic Honor Policy, he or she should report the incident to the instructor of the course. When an instructor believes that a student has violated the Academic Honor Policy in one of the instructor’s classes, the instructor must first contact the Office of the Dean of the Faculties to discover whether the student has a prior record of academic dishonesty in order to determine whether to proceed with a Step 1 agreement. The instructor must also inform the department chair or dean. (Teaching assistants must seek guidance from their supervising faculty member and adjunct instructors must seek guidance from their department chair.) However, faculty members or others who do not have administrative authority for enforcing the Academic Honor Policy should not be informed of the allegation, unless they have established a legitimate need to know. If pursuing a Step 1 agreement is determined to be possible, the instructor shall discuss the evidence of academic dishonesty with the student and explore the possibility of a Step 1 agreement. Four possible outcomes of this discussion may occur:

1. If the charge appears unsubstantiated, the instructor will drop the charge, and no record of academic dishonesty will be created. The instructor should make this decision using the “preponderance of the evidence” standard.

2. The student may accept responsibility for the violation and accept the academic sanction proposed by the instructor. In this case, any agreement involving an academic penalty must be put in writing and signed by both parties on the “Academic Honor Policy Step 1 Agreement” form, which must then be sent to the Dean of Students Department. This agreement becomes a confidential student record of academic dishonesty and will be removed from the student’s file five years from the date of the final decision in the case. Any grade imposed as the result of an academic sanction will remain on the student’s transcript indefinitely and will not be subject to course drop or withdrawal.

3. The student may accept the responsibility for the violation, but contest the proposed academic sanction. In this circumstance, the student must submit the “Academic Honor Policy Referral to Contest Sanction” form along with supporting documentation to the Office of the Dean of the Faculties. The Dean of the Faculties (or designee) will review the submitted documentation to determine whether the instructor has imposed a sanction that is disproportionate to the offense. The Dean of the Faculties may affirm or modify the sanction as appropriate. The decision that results from this review is final.

4. The student may deny responsibility. In this circumstance, the instructor submits the “Academic Honor Policy Hearing Referral” form along with supporting documentation to the Dean of the Faculties Office for an Academic Honor Policy Hearing. The student
is issued a letter detailing the charges within ten class days of the receipt of the referral, and the schedule for the hearing will be set as soon as possible and within 90 days from the date of the letter. These timelines may be modified in unusual circumstances. Unless
all parties agree, the hearing will not be held any sooner than 7 class days from the student’s receipt of the charge letter. The process then proceeds to Step 2.

If the student is found to have a prior record of academic dishonesty or the serious nature of the allegations merits a formal hearing, the instructor must refer the matter to Step 2 for an Academic Honor Policy Hearing by submitting the “Academic Honor Policy Hearing Referral” form and appropriate documentation to the Office of the Dean of the Faculties.

Allegations of academic dishonesty involving a graduate student engaged in any phase of the preliminary examination, thesis, or dissertation will be treated as egregious and will be resolved through the Step 2 process, in which the major professor will serve as the “instructor” under the hearing procedures. The Dean of the Faculties and the student’s academic dean, (as well as the Vice President for Research in cases involving grant-funded research), should be informed as soon as possible of all such allegations. The decision regarding whether to submit a hearing referral will be made by a committee consisting of the department chair and two faculty members appointed by the academic dean, one of whom should be the student’s committee member serving as the University representative (if one has been identified), excluding the major professor. In rendering its decision, this committee should review all available information and consult with the major professor and the academic dean.

Step 2. Academic Honor Policy Hearing. A panel consisting of five members shall hear the case. The panel shall include: one faculty member appointed by the dean from the unit in which the academic work is conducted; one faculty member appointed by the Dean of the Faculties who is not from that unit; and two students appointed through procedures established by the Dean of Students Department. The panel shall be chaired by the Dean of the Faculties (or designee), who votes only in case of a tie.

The hearing will be conducted in a non-adversarial manner with a clear focus on finding the facts within the academic context of the academic work. The student is presumed innocent going into the proceeding. After hearing all available and relevant information from the student and the instructor, the panel determines whether or not to find the student responsible for the alleged violation using the “preponderance of the evidence” standard. If the student is found responsible for the violation, the panel is informed about any prior record of academic honor policy violations and determines an academic sanction (and disciplinary sanction, if appropriate). In some cases, a Step 1 sanction may have been appropriately proposed prior to the convening of an Academic Honor Hearing. If the student is found responsible in these cases, the panel typically will impose a sanction no more severe than that which was proposed by the faculty member. The panel is required to provide a clear written justification for imposing a sanction more severe than the sanction proposed in Step 1.
The chair of the Academic Honor Policy hearing panel will report the decision to the student, the instructor, the academic unit, the Dean of Students Department, and the Registrar, if appropriate.
If the student is found “responsible,” this outcome will be recorded with the Dean of Students Department and becomes a confidential student record of an Academic Honor Policy violation. Records in which suspension or a less severe sanction (including all academic sanctions) is imposed will be removed five years from the date of the final decision in the case. Any grade imposed as the result of an academic sanction will remain on the student’s transcript indefinitely and will not be subject to course drop or withdrawal. Records involving dismissal and expulsion will be retained permanently, except in cases where a dismissed student is readmitted. Those records will be removed five years from the date of the student’s readmission.

Sanctions

Step 1
This Step 1 procedure is implemented with first-offense allegations that do not involve egregious violations. The decision regarding whether an allegation is egregious is made by the Dean of the Faculties (or designee) and the instructor. The criteria used by the instructor to determine the proposed academic penalty should include the seriousness and the frequency of the alleged violation. The following sanctions are available in the Step 1 procedure.

1. additional academic work
2. a reduced grade (including “0” or “F”) for the assignment
3. a reduced grade (including “F”) for the course

Step 2
An Academic Honor Policy Hearing is held for all second offenses, for all first offenses that involve egregious violations of the Academic Honor Policy, for all offenses that involve simultaneous violations of the Student Conduct Code, and in all cases where the student denies responsibility for the alleged violation. The decision regarding whether an allegation is egregious is made by the Dean of the Faculties (or designee) and the instructor. In some cases, a Step 1 sanction may have been appropriately proposed prior to the convening of an Academic Honor Policy Hearing. If the student is found responsible in these cases, the panel typically will impose a sanction no more severe than that which was proposed by the faculty member. The panel is required to provide a clear written justification for imposing a sanction more severe than the sanction proposed in Step 1. Students will not be penalized solely for exercising their right to request a Step 2 hearing. The following sanctions are available in Step 2 (see the Procedures section) and may be imposed singly or in combination:

1. additional academic work
2. a reduced grade (including “0” or “F”) for the assignment
3. a reduced grade (including “F”) for the course
4. Reprimand (written or verbal)
5. Educational Activities - attendance at educational programs, interviews with appropriate officials,
planning and implementing educational programs, or other educational activities.
Fees may be charged to cover the cost of educational activities.

6. Restitution

7. Conduct Probation - a period of time during which any further violation of the Academic Honor Policy may result in more serious sanctions being imposed. Some of the restrictions that may be placed on the student during the probationary period include, but are not limited to: participation in student activities or representation of the University on athletic teams or in other leadership positions.

8. Disciplinary Probation - a period of time during which any further violation of the Academic Honor Policy puts the student’s status with the University in jeopardy. If the student is found “responsible” for another violation during the period of Disciplinary Probation, serious consideration will be given to imposing a sanction of Suspension, Dismissal, or Expulsion. The restrictions that may be placed on the student during this time period are the same as those under Conduct Probation.

9. Suspension - Separation from the University for a specified period, not to exceed two years.

10. Dismissal - Separation from the University for an indefinite period of time. Dismissal is considered a final sanction, but readmission is possible in some cases under documented exceptional circumstances. No consideration will be given to readmitting a dismissed student within the first three years after a dismissal is imposed.

11. Expulsion - Separation from the University without the possibility of readmission.

12. Withholding of diplomas, transcripts, or other records for a specified period of time.

13. Suspension of degree, in cases where an offense is discovered after the degree is posted.

14. Revocation of degree, in cases where an offense is discovered after the degree is posted.

Appeals

Decisions of the Academic Honor Policy Hearing Panel may be appealed to the Academic Honor Policy Appeal Committee, a standing four-member committee composed of two faculty appointed by the President and two students appointed by the Vice President for Student Affairs. The chair will be appointed annually by the President, and members will serve two-year renewable terms. In case of a tie vote regarding a case, the committee will submit a written report to the Provost, who will then make the final determination.

On appeal, the burden of proof shifts to the student to prove that an error has occurred. The only recognized grounds for appeal are:

1. Due process errors involving violations of a student’s rights that substantially affected the outcome of the initial hearing.

2. Demonstrated prejudice against the charged student by any panel member. Such prejudice must be evidenced by a conflict of interest, bias, pressure, or influence that precluded a fair and
impartial hearing.
3. New information that was not available at the time of the original hearing.
4. A sanction that is extraordinarily disproportionate to the offense committed.
5. The preponderance of the evidence presented at the hearing does not support a finding of responsible. Appeals based on this consideration will be limited to a review of the record of the initial hearing.

The procedures followed during the appeals process are:

1. The student should file a written letter of appeal to the Office of the Dean of the Faculties within 10 class days after being notified of the Academic Honor Policy Hearing Panel decision. This letter should outline the grounds for the appeal (see 1-5 above) and should provide supporting facts and relevant documentation.
2. The Academic Honor Policy Appeal Committee will review this letter of appeal and will hear the student and any witnesses called by the student, except in appeals based on consideration #5 above. The committee may also gather any additional information it deems necessary to make a determination in the case.
3. The Appeals Committee may affirm, modify, or reverse the initial panel decision, or it may order a new hearing to be held. This decision becomes final agency action when it is approved by the Provost. In cases where the student is found responsible, the decision becomes a confidential student record of academic dishonesty.
4. Appellate decisions are communicated in writing to the student, the instructor, the Office of the Dean of the Faculties, and the Dean of Students Department within 30 class days of the appellate hearing.

**Academic Honor Policy Committee**

An Academic Honor Policy Committee shall be appointed by the University President. The Committee will include: three faculty members, selected from a list of six names provided by the Faculty Senate Steering Committee and three students, selected from a list of six names provided by the Student Senate. The Dean of the Faculties or designee and the Dean of Students or designee shall serve ex officio. Faculty members will serve three-year staggered terms, and students will serve one-year terms. The committee will meet at least once a semester. It will monitor the operation and effectiveness of the Academic Honor Policy, work with the Faculty Senate and the Student Senate to educate all members of the community regarding academic integrity, and make recommendations for changes to the policy.

**Amendment Procedures**

Amendments to the Academic Honor Policy may be initiated by the Academic Honor Policy Committee, the Faculty Senate, the Student Senate, and/or the Vice President for Academic Affairs. Amendments to the policy must be approved by both the Faculty Senate and the Student Senate.
